The new innovative Hilti PX 10 Transpointer tool, provides a fast and easy solution to determine the start and exit point location for your drilling and coring applications. The easy-to-read display shows wall thickness and enables easy selection of the proper drill bit or core bit for the application. The PXA 70 slope adaptor allows for versatility in drilling or coring at an angle. Innovative and easy, the Hilti PX 10 keeps you right on the mark every time.

**Time & Cost Saving**
- Eliminate time-consuming procedures such as drilling pilot-holes, measuring manually and “trial and error” measuring
- Reduce inconvenient overhead drilling by locating points through a floor or wall allowing holes to be drilled from either side
- Single person operation with use of adhesive putty

**Innovation**
- Ability to measure wall and ceiling thickness on most materials (i.e. wood, drywall, block, concrete with or without rebar)
- Large display window for measurements
- Use of the slope adaptor allows angle drilling and coring

**Durable**
- Rubber casing protects against dust and is water resistant (IP 56 protection level)

**Operating Range**
- typical: 2” - 4’5” / 50 mm - 1.35 m (in all directions)

**Accuracy**
- (at 21˚C / 70˚C) +/- 1/16” at 30.5 ft (+/- 1.5 mm at 10 m)

**Drilling application**
- average conditions: +/- 0.32” for every 7.87” thickness up to 3.28’
- ideal conditions: +/- 0.08” for every 7.87” thickness up to 3.28’
  (w/o metal influence)
- +/- 2 mm for every 200 mm thickness up to 1 m
  (w/o metal influence)

**Wall thickness**
- average conditions: +/- 5% of thickness up to 1 m / 3.28’

**Slope adapter**
- +/- 2°

**Auto-Shut off**
- Transmitter: 17 min; Receiver: 8 min or 3 min if no signal change

**Battery Life**
- 17 hrs

**Operating Temperature**
- PX 10T, PX 10R, PUA 91
  - -4°F to +131°F / -20°C to 55°C
- PUA 92
  - +50°F to +104°F / +10°C to 40°C

**Protection Class (excluding battery compartment)**
- IP 56
