  - a. DESIGN LOADS (STATIC, U.N.O.):
    - DL: SCH. 40 PIPE FILLED WITH WATER.
  - b. LATERAL LOADS NOT CONSIDERED
  - c. BUILDING CODE: NOT SPECIFIED
  - d. CORROSION RESISTANCE REQD.: NOT SPECIFIED
  - e. MAX. SUPPORT SPACING = 10'-0"
- 3. ALL LOADS ASSUMED TO ACT AT CENTER OF PIPE(S), U.N.O.
- 4. REFER TO COMPONENT MANUFACTURER'S IFUS FOR REQUIRED INSTALLATION INFO.
- E.O.R. MUST BE NOTIFIED OF ANY DEVIATIONS FROM EXISTING/ NEW SUBSTRATE CONDITIONS SHOWN HEREIN TO VALIDATE ACCEPTANCE OF THIS HILTI DESIGN PRIOR TO INSTALLATION.

All loading and design criteria supplied by customer is assumed accurate. Only the stated Design Assumptions were considered, and must be verified by the responsible Engineer of Record (EOR). The basis of Hilti component and connection design is the published data in the current Hilti Technical Guide, including material and cross-section properties, allowable load values, factors of safety, methods of calculation, and limiting factors. The EOR must verify suitability for any specific application, and the capacity of the supportive structure to receive the shown configuration and associated reaction loads. Modification to components and/or design may alter performance and must be evaluated by the EOR.

- . ALL LOADS ASSUMED TO ACT AT CENTER OF PIPE(S), U.N.O.
- 4. REFER TO COMPONENT MANUFACTURER'S IFUS FOR REQUIRED INSTALLATION INFO.
- 5. E.O.R. MUST BE NOTIFIED OF ANY DEVIATIONS FROM EXISTING SUBSTRATE CONDITIONS SHOWN HEREIN TO VALIDATE ACCEPTANCE OF THIS HILTI DESIGN PRIOR TO INSTALLATION.
- 6. ADEQUACY/COMPATIBILITY OF NON-PENETRATING SUPPORT PAD WITH MI SYSTEM NOT VERIFIED BY HILTI.
- 7. E.O.R. SHALL VERIFY OVERALL MI SUPPORT SYSTEM STABILITY.

All loading and design criteria supplied by customer is assumed accurate. Only the stated Design Assumptions were considered, and must be verified by the responsible Engineer of Record (EOR). The basis of Hilti component and connection design is the published data in the current Hilti Technical Guide, including material and cross-section properties, allowable load values, factors of safety, methods of calculation, and limiting factors. The EOR must verify suitability for any specific application, and the capacity of the supportive structure to receive the shown configuration and associated reaction loads. Modification to components and/or design may alter performance and must be evaluated by the EOR

#### NOTE(S):

- 1. PRELIMINARY NOT FOR CONSTRUCTION
- 2. DESIGN ASSUMPTIONS:
  - a. NO LOADS CONSIDERED CONCEPT ONLY
  - b. LATERAL LOADS CONSIDERED AS PER NFPA
  - c. BUILDING CODE: IBC 2006 & ASCE 7-05
- d. CORROSION RESISTANCE REQD.: HDG / EG
- 3. ALL LOADS ASSUMED TO ACT AT CENTER OF PIPE(S), U.N.O.
- 4. REFER TO COMPONENT MANUFACTURER'S IFUS FOR REQUIRED INSTALLATION INFO.

All loading and design criteria supplied by customer is assumed accurate. Only the stated Design Assumptions were considered, and must be verified by the responsible Engineer of Record (EOR). The basis of Hilti component and connection design is the published data in the current Hilti Technical Guide, including material and cross-section properties, allowable load values, factors of safety, methods of calculation, and limiting factors. The EOR must verify suitability for any specific application, and the capacity of the supportive structure to receive the shown configuration and associated reaction loads. Modification to components and/or design may alter performance and must be evaluated by the EOR.

  - a. DESIGN LOADS (STATIC, U.N.O.): DL: 6" Ø STD. PIPE: 480 lbs. WL: 40 psf (TRANSVERSE)
    - EL: 0.10 g (LONGITUDINAL)
  - b. BUILDING CODE: IBC 2006
- c. CORROSION RESISTANCE REQD.: HDG
- 3. MAX. SUPPORT SPACING = SEE SUPPORT SPACING TABLE 4.5 IN DOCUMENT M-2-3.
- 4. ALL LOADS ASSUMED TO ACT AT CENTER OF PIPE(S), U.N.O.
- 5. REFER TO COMPONENT MANUFACTURER'S IFUS FOR REQUIRED INSTALLATION INFO.
- 6. E.O.R. MUST BE NOTIFIED OF ANY DEVIATIONS FROM EXISTING/ NEW SUBSTRATE CONDITIONS SHOWN HEREIN TO VALIDATE ACCEPTANCE OF THIS HILTI DESIGN PRIOR TO INSTALLATION.

All loading and design criteria supplied by customer is assumed accurate. Only the stated Design Assumptions were considered, and must be verified by the responsible Engineer of Record (EOR). The basis of Hilti component and connection design is the published data in the current Hilti Technical Guide, including material and cross-section properties, allowable load values, factors of safety, methods of calculation, and limiting factors. The EOR must verify suitability for any specific application, and the capacity of the supportive structure to receive the shown configuration and associated reaction loads. Modification to components and/or design may alter performance and must be evaluated by the EOR.
