ORIGINAL OPERATING INSTRUCTIONS

DX 460 GR powder-actuated tool for grating applications

It is essential that the operating instructions are read before the tool is operated for the first time.

Always keep these operating instructions together with the tool.

Ensure that the operating instructions are with the tool when it is given to other persons.

Description of main parts

① Exhaust gas piston return unit
② Guide sleeve
③ Housing
④ Cartridge guideway
⑤ Power regulation wheel release button
⑥ Power regulation wheel
⑦ Trigger
⑧ Grip
⑨ Piston return unit release button
⑩ Ventilation slots
⑪ Piston rings
⑫ Piston
⑬ Replaceable fastener guide nosepiece
⑭ Fastener guide release button
⑮ Buffer

* These parts may be replaced by the user/operator.

1. Safety precautions

1.1 Basic safety instructions
In addition to the safety precautions listed in the individual sections of these operating instructions, the following points must be strictly observed at all times.

1.2 Only use Hilti cartridges or cartridges of equivalent quality
The use of cartridges of inferior quality in Hilti tools may lead to build-up of unburned powder, which may explode and cause severe injuries to operators and bystanders. At a minimum, cartridges must either:

a) Be confirmed by their supplier to have been successfully tested in accordance with EU standard EN 16264

NOTE:
● All Hilti cartridges for powder-actuated tools have been tested successfully in accordance with EN 16264.
● The tests defined in the EN 16264 standard are system tests carried out by the certification authority using specific combinations of cartridges and tools. The tool designation, the name of the certification authority and the system test number are printed on the cartridge packaging.

or

b) Carry the CE conformity mark (mandatory in the EU as of July 2013).

See packaging sample at: www.hilti.com/dx-cartridges

1.3 Use as intended
The tool is designed for professional use in fastening applications in construction where nails, threaded studs and composite fasteners are driven into concrete, steel and sand-lime block masonry.

1.4 Improper use
● Manipulation or modification of the tool is not permissible.
● Do not operate the tool in an explosive or flammable atmosphere, unless the tool is specially approved for such use.
● To avoid the risk of injury, use only original Hilti fasteners, cartridges, accessories and spare parts or those of equivalent quality.
● Observe the information printed in the operating instructions concerning operation, care and maintenance.
Never point the tool at yourself or any bystander. 
Never press the muzzle of the tool against your hand or other part of your body.
Do not drive nails into excessively hard or brittle materials such as glass, marble, plastic, bronze, brass, copper, natural rock, insulation material, hollow brick, glazed tile, thin-gauge sheet metal (< 4 mm), grey cast iron, spheroidal cast iron and gas concrete.

1.5 Technology
This tool is designed with the latest available technology.
The tool and its ancillary equipment may present hazards when used incorrectly by untrained personnel or not as directed.

1.6 Making the workplace safe
Ensure that the workplace is well lit.
Objects which could cause injury should be removed from the working area.
Operate the tool only in well-ventilated working areas.
The tool is for hand-held use only.
Avoid unfavorable body positions. Work from a secure stance and stay in balance at all times.
Keep other persons, children in particular, outside the working area.
Before using the tool, make sure that no one is standing behind or below the point where fasteners are to be driven.
Keep the grip dry, clean and free from oil and grease.

1.7 General safety precautions
Operate the tool only as directed and only when it is in faultless condition.
If a cartridge misfires or fails to ignite, proceed as follows:
1. Keep the tool pressed against the working surface for 30 seconds.
2. If the cartridge still fails to fire, withdraw the tool from the working surface, taking care that it is not pointed towards your body or bystanders.
3. Manually advance the cartridge strip one cartridge. Use up the remaining cartridges on the strip. Remove the used cartridge strip and dispose of it in such a way that it can be neither reused nor misused.
If 2–3 cartridge misfires occur in succession (without clearly audible noise of the cartridge firing and the fastener being driven with significantly less power), proceed as follows:
1. Stop using the tool immediately.
2. Unload and disassemble the tool (see 8.3).
3. Check that the correct combination of fastener guide, piston and fastener are used (see 6.2).
4. Check the buffer, piston and fastener guide for wear and replace the parts if necessary (see 8.4).
5. Clean the tool.
6. Do not continue to use the tool if the problem persists after carrying out the steps described above. Have the tool checked and repaired if necessary at a Hilti repair center.
Never attempt to pry a cartridge from the magazine strip or the tool.
Keep the arms flexed when the tool is fired (do not straighten the arms).
Never leave the loaded tool unattended.
Always unload the tool before beginning cleaning, servicing or changing parts and before storage.
Unused cartridges and tools not presently in use must be stored in a place where they are not exposed to humidity or excessive heat. The tool should be transported and stored in a toolbox that can be locked or secured to prevent use by unauthorized persons.

1.8 Temperature
Do not disassemble the tool while it is hot.
Never exceed the recommended maximum fastener driving rate (number of fastenings per hour). The tool may otherwise overheat.
Should the plastic cartridge strip begin to melt, stop using the tool immediately and allow it to cool down.

1.9 Requirements to be met by users
The tool is intended for professional use.
The tool may be operated, serviced and repaired only by authorised, trained personnel. This personnel must be informed of any special hazards that may be encountered.
Proceed carefully and do not use the tool if your full attention is not on the job.
Stop working with the tool if you feel unwell.

1.10 Personal protective equipment
The operator and other persons in the immediate vicinity must always wear eye protection, a hard hat and ear protection.
2. General information

2.1 Signal words and their meaning

WARNING
The word WARNING is used to draw attention to a potentially dangerous situation which could lead to severe personal injury or death.

CAUTION
The word CAUTION is used to draw attention to a potentially dangerous situation which could lead to minor personal injury or damage to the equipment or other property.

2.2 Pictograms

Warning signs

General warning

Warning: hot surface

Read the operation instructions before use

Obligation signs

Wear eye protection

Wear a safety helmet

Wear ear protection

The numbers refer to the illustrations. The illustrations can be found on the fold-out cover pages. Keep these pages open while you read the operating instructions.

In these operating instructions, the designation “the tool” always refers to the DX 460 GR powder-actuated tool.

Location of identification data on the tool

The type designation and the serial number are printed on the type plate on the tool. Make a note of this information in your operating instructions and always refer to it when making an enquiry to your Hilti representative or service department.

Type: DX 460 GR

Serial no.:  

3. Description

The tool is designed for professional use in fastening applications where nails, threaded studs and composite fasteners are driven into concrete, steel and sand-lime block masonry.

The tool works on the well-proven piston principle and is therefore not related to high-velocity tools. The piston principle provides an optimum of working and fastening safety. The tool works with cartridges of 6.8/11 caliber.

The piston is returned to the starting position and the cartridges are fed to the firing chamber automatically by gas pressure from the fired cartridge. This permits fastenings to be made very quickly and economically with nails and threaded studs.

As with all powder-actuated tools, the tool, fastener program and cartridge program form a “technical unit”. This means that optimal fastening with this system can only be assured if the fasteners and cartridges are specially manufactured for it, or products of equivalent quality, are used. The fastening and application recommendations given by Hilti are only applicable if these conditions are observed.

The tool features 5-way safety – for the safety of the operator and bystanders.

The piston principle

The energy from the propellant charge is transferred to a piston, the accelerated mass of which drives the fastener into the base material. As approximately 95 % of the kinetic energy is absorbed by the piston, the fastener is driven into the base material at much reduced velocity (less than 100 m/sec.) in a controlled manner. The driving process ends when the piston reaches the end of its travel. This makes dangerous through-shots virtually impossible when the tool is used correctly.

The drop-firing safety device 2 is the result of coupling the firing mechanism with the cocking movement. This prevents the Hilti DX tool from firing when it is dropped onto a hard surface, no matter at which angle the impact occurs.

The trigger safety device 3 ensures that the cartridge cannot be fired simply by pulling the trigger only. The tool can be fired only when pressed against the work surface.

The contact pressure safety device 4 requires the tool to be pressed against the work surface with a signifi-
The tool can be fired only when pressed fully against the work surface in this way.

In addition, all Hilti DX tools are equipped with an unintentional firing safety device. This prevents the tool from firing if the trigger is pulled and the tool then pressed against the work surface. The tool can be fired only when it is first pressed against the work surface correctly and the trigger then pulled.

4. Cartridges, accessoires and fasteners

Threaded studs

6. Before use

6.1 Tool inspection

- Ensure that there is no cartridge strip in the tool. If there is a cartridge strip in the tool, remove it by hand from the tool.
- Check all external parts of the tool for damage at regular intervals and check that all controls operate properly. Do not operate the tool when parts are damaged or when the controls do not operate properly. If necessary, have the tool repaired at a Hilti service centre.
- Check the buffer and piston for wear (see “8. Care and maintenance”).

6.2 Choosing the right fastener guide / piston / fastener combination

Use of the wrong combination may present a risk of injury. Damage to the tool may also result or fastening quality may be negatively affected.
7. Operation

CAUTION

■ The base material may splinter when a fastener is driven or fragments of the cartridge strip may fly off.
■ Flying fragments may injure parts of the body or the eyes.
■ Wear safety goggles and a hard hat (users and bystanders).

WARNING

■ The tool could be made ready to fire if pressed against a part of the body (e.g. hand).
■ This could cause a nail to be driven into a part of the body.
■ Never press the muzzle of the tool against parts of the body.

WARNING

■ Under certain circumstances, the tool could be made ready to fire by pulling back the fastener guide or the fastener by hand.
■ When in the “ready to fire” state, a fastener could be driven into a part of the body.
■ Never pull back the fastener guide or fastener by hand.

NOTE

These application recommendations must always be observed. For more specific information, refer to the Hilti Fastening Technology Manual, which is available from your local Hilti organisation.

Steel

- A = min. edge distance = 15 mm (5/8”)
- B = min. spacing = 20 mm (3/4”)
- C = min. base material thickness = 4 mm (5/32”)

Penetration depth in steel: 12 ± 2 mm

7.1 Loading the tool

1. Insert the fastener (head first) until the washer is held in the tool.
2. Load the cartridge strip (narrow end first) by inserting it into the bottom of the tool grip until flush. If the strip has been partly used, pull it through until a live cartridge is in the chamber. (The last visible number on the back of the cartridge strip indicates which cartridge is next to be fired.)

7.2 Adjusting the driving power

Select a cartridge power level and power setting to suit the application. If you cannot estimate this on the basis of previous experience, always begin with the lowest power.

1. Press the release button.
2. Turn the power regulation wheel to 1.
3. Drive a fastener.
4. If the fastener doesn’t penetrate deeply enough, increase the power level and repeat steps 1 to 3. Repeat until the desired depth of penetration is reached. Use a more powerful cartridge if necessary.

7.3 Fastening with the tool

1. Press the tool firmly against the work surface at right angles.
2. Fire the tool by pulling the trigger.

WARNING

■ Never attempt to drive a fastener in an existing hole except where recommended by Hilti, e.g. when using the DX X-BT system.
■ Never attempt to redrive the same fastener.
■ Never exceed the maximum fastener driving rate.

7.4 X-FCM grating disc installation

1. Place the grating section.
2. Fasten the threaded stud into the steel frame. Using the centering device will allow you to fasten perfect-
1. Plates must be pre-drilled or pre-punched.
2. Place and align the plate section.
3. Fasten the X-CRM threaded stud through the pre-dilled hole. Check the penetration depth with a gauge by measuring the standoff above the surface fastened into (NVS)
4. Start the X-FCP on the stud by hand.
5. Tighten the plate. Tightening torque = 5 to 8 Nm

7.5 X-FCP checker plate installation

7.6 Unloading the tool

Ensure that no cartridge strip or fastener is loaded in the tool. Remove the cartridge strip by pulling it upwards out of the tool and remove the fastener from the fastener guide.

8. Care and maintenance

When this type of tool is used under normal operating conditions, dirt and residues build up inside the tool and functionally relevant parts are also subject to wear. Regular inspections and maintenance are thus essential in order to ensure reliable operation. We recommend that the tool is cleaned and the piston and piston brake are checked at least weekly when the tool is subjected to intensive use, and at the latest after driving 10,000 fasteners.

8.1 Care of the tool

The outer casing of the tool is manufactured from impact-resistant plastic. The grip comprises a synthetic rubber section. The ventilation slots must be unobstructed and kept clean at all times. Do not permit foreign objects to enter the interior of the tool. Use a slightly damp cloth to clean the outside of the tool at regular intervals. Do not use a spray or steam-cleaning system for cleaning.

8.2 Maintenance

Check all external parts of the tool for damage at regular intervals and check that all controls operate properly. Do not operate the tool when parts are damaged or when the controls do not operate properly. If necessary, have the tool repaired at a Hilti service centre.

Servicing the tool

The tool should be serviced if:
1. Cartridges misfire
2. Fastener driving power is inconsistent
3. If you notice that:
   ● contact pressure increases,
   ● trigger force increases,
   ● power regulation is difficult to adjust (stiff),
   ● the cartridge strip is difficult to remove.

CAUTION while cleaning the tool:

● Never use grease for maintenance/lubrication of tool parts. This may strongly affect the functionality of the tool. Use only Hilti spray or such of equivalent quality.
● Dirt from DX tool contains substances that could be endangering your health.
   – Do not breath in the dust from cleaning
   – Keep dust away from food
   – Wash your hands after cleaning the tool
Disassemble the tool
1. Ensure that no cartridge strip or fastener is loaded in the tool. Remove the cartridge strip by pulling it upwards out of the tool and remove the fastener from the fastener guide.
2. Press the release button located at the side of the fastener guide.
3. Unscrew the fastener guide.
4. Remove the buffer by bending it away from the fastener guide.
5. Remove the piston.

Check the buffer and piston for wear
Replace the buffer if:
- the metal ring is loose or broken,
- the buffer no longer holds on the fastener guide,
- excessive, uneven wear beneath the metal ring is noticed.

Replace the piston if:
- it is broken,
- the tip is heavily worn (i.e. a 90° segment is chipped off),
- piston rings are broken or missing,
- it is bent (check by rolling on an even surface).

NOTE
- Do not use worn pistons. Do not modify or grind pistons.

Check the fastener guide for wear
The nosepiece of the X-460-F8GR fastener guide should be replaced if the tubular section is damaged (e.g. bent, widened or cracked). For instructions on replacing the nosepiece.
1. Ensure that no cartridge strip or fastener is loaded in the tool. Remove the cartridge strip by pulling it upwards out of the tool and remove the fastener from the fastener guide.
2. Press the release button on the side of the fastener guide.
3. Unscrew the fastener guide from the tool
4. Check the buffer and piston for wear (see care and maintenance instructions).
5. Pull the moveable ring downwards and unscrew the fastener guide nosepiece
6. Replace the fastener guide nosepiece
7. Pull the moveable ring downwards and screw on the fastener guide nosepiece
8. Push the piston into the tool as far as it will go
9. Press the buffer onto the fastener guide until it engages
10. Push the fastener guide firmly onto the exhaust gas piston return unit
11. Screw the fastener guide onto the tool until it engages.

Clean the piston rings
1. Clean the piston rings with the flat brush until they move freely.
2. Spray the piston rings lightly with Hilti spray.

Clean the threaded section of the fastener guide
1. Clean the thread with the flat brush.
2. Spray the thread lightly with Hilti spray.

Disassemble the piston return unit
1. Press the release button at the gripping part.
2. Unscrew the piston return unit.

Clean the piston return unit
1. Clean the spring with the flat brush.
2. Clean the front end with the flat brush.
3. Use the small round brush to clean the two holes at the end face.
4. Spray the piston return unit lightly with Hilti spray.

Clean inside the housing
1. Use the large round brush to clean inside the housing.
2. Spray the inside of the housing lightly with Hilti spray.

Clean the cartridge strip guideway
Use the scraper provided to clean the right and left cartridge strip guideways. The rubber cover must be lifted slightly to facilitate cleaning of the guideway.

Spray the power regulation wheel lightly with Hilti spray

Fit the piston return unit
1. Bring the arrows on the housing and on the exhaust gas piston return unit into alignment.
2. Push the piston return unit into the housing as far as it will go.
3. Screw the piston return unit onto the tool until it engages.

Assemble the tool
1. Push the piston into the tool as far as it will go.
2. Press the buffer onto the fastener guide until it snaps into place.
3. Press the fastener guide firmly onto the piston return unit.
4. Screw the fastener guide onto the tool until it engages.

Checking the tool following care and maintenance
After carrying out care and maintenance on the tool, check that all protective and safety devices are fitted and that they function correctly.

NOTE
- The use of lubricants other than Hilti spray could damage rubber parts, especially the buffer.
## 9. Troubleshooting

<table>
<thead>
<tr>
<th>Fault</th>
<th>Cause</th>
<th>Possible remedies</th>
</tr>
</thead>
</table>
| Cartridge not transported | Damaged cartridge strip  
Carbon build up  
Tool damaged | Change cartridge strip  
Clean the cartridge strip guide-way (see 8.11)  
If the problem persists:  
Contact Hilti Repair Centre |
| Cartridge strip cannot be removed | Tool overheated because of high setting rate  
Tool damaged | Let the tool cool down and then carefully try to remove the cartridge strip  
If not possible:  
Contact Hilti Repair Centre |
| Cartridge cannot be fired | Bad cartridge  
Carbon build-up | Manually advance the cartridge strip one cartridge  
If the problem occurs more often: Clean the tool (see 8.3–8.14)  
If the problem persists:  
Contact Hilti Repair Centre |
| Cartridge strip melts | Tool is compressed too long while fastening.  
Fastening frequency is too high | Compress the tool less long while fastening.  
Remove the cartridge strip  
Disassemble the tool (see 8.3) for fast cooling and to avoid possible damage  
If the tool cannot be disassembled:  
Contact Hilti Repair Centre |
| Cartridge falls out of the cartridge strip | Fastening frequency is too high | Immediately discontinue using the tool and let it cool down  
Remove cartridge strip  
Let the tool cool down.  
Clean the tool and remove loose cartridge.  
If it is impossible to disassemble the tool:  
Contact Hilti Repair Centre |

**WARNING**

Never attempt to pry a cartridge from the magazine strip or tool.

**WARNING**

Never attempt to pry a cartridge from the magazine strip or tool.
### Piston return unit is stuck

**The operator notices:**
- increased contact pressure
- increased trigger force
- power regulation stiff to adjust
- cartridge strip is difficult to remove

**Possible remedies:**
- Clean the tool (see 8.3–8.14)
- Check that the correct cartridges are used (see 1.2) and that they are in faultless condition.

---

### Piston is stuck in the piston return unit and cannot be removed

**Cause:**
- Carbon build-up

**Possible remedies:**
- Remove the cartridge strip and clean the tool (see 8.3–8.14).
- Check the piston and buffer and replace these parts if necessary (see 8.4).
- If the problem persists:
  - Contact Hilti Repair Centre

---

### Stud does not penetrate surface

**Cause:**
- Driving power too low
  - Application limit exceeded (very hard surface)
- Unsuitable system

**Possible remedies:**
- Try higher power setting or heavier cartridge
- Switch to more powerful system like DX 76 PTR

---

### Studs does not hold in base material

**Cause:**
- Thin steel base material (4 to 5 mm steel)

**Possible remedies:**
- Try different power setting or different cartridge
### 10. Disposal

Most of the materials from which Hilti power actuated tools are manufactured can be recycled. The materials must be correctly separated before they can be recycled. In many countries, Hilti has already made arrangements for taking back your old powder actuated tools for recycling. Please ask your Hilti customer service department or Hilti sales representative for further information.

Should you wish to return the power actuated tool yourself to a disposal facility for recycling, proceed as follows: Dismantle the tools as far as possible without the need for special tools.

#### Separate the individual parts as follows:

<table>

</tbody>
</table>
11. Manufacturer's warranty – DX Tools

Hilti warrants that the tool supplied is free of defects in material and workmanship. This warranty is valid so long as the tool is operated and handled correctly, cleaned and serviced properly and in accordance with the Hilti Operating Instructions, and the technical system is maintained. This means that only original Hilti consumables, components and spare parts, or other products of equivalent quality, may be used in the tool.

This warranty provides the free-of-charge repair or replacement of defective parts only over the entire lifespan of the tool. Parts requiring repair or replacement as a result of normal wear and tear are not covered by this warranty.

Additional claims are excluded, unless stringent national rules prohibit such exclusion. In particular, Hilti is not obligated for direct, indirect, incidental or consequential damages, losses or expenses in connection with, or by reason of, the use of, or inability to use the tool for any purpose. Implied warranties of merchantability or fitness for a particular purpose are specifically excluded.

For repair or replacement, send tool or related parts immediately upon discovery of the defect to the address of the local Hilti marketing organization provided.

This constitutes Hilti’s entire obligation with regard to warranty and supersedes all prior or contemporaneous comments and oral or written agreements concerning warranties.

13. CIP approval mark

The following applies to C.I.P. member states outside the EU and EFTA judicial area:

The Hilti DX 460 has been system and type tested. As a result, the tool bears the square approval mark showing approval number S 812. Hilti thus guarantees compliance with the approved type.

Unacceptable defects or deficiencies, etc. determined during use of the tool must be reported to the person responsible at the approval authority (PTB, Braunschweig) and to the Office of the Permanent International Commission (C.I.P.) (Permanent International Commission, Avenue de la Renaissance 30, B-1000 Brussels, Belgium).

Testing procedure:
Enveloping surface method in anechoic room on reflective surface area in accordance with E DIN EN 15895, DIN EN ISO 3745 and DIN EN ISO 11201.

NOTE: The noise emissions measured and the associated measurement uncertainty represent the upper limit for the noise values to be expected during the measurements.

Variations in operating conditions may cause deviations from these emission values.

1 $\pm$ 2 dB (A)
2 $\pm$ 2 dB (A)
3 $\pm$ 2 dB (C)

Vibration

The declared total vibration value according to 2006/42/EC does not exceed 2.5 m/s².
