ORIGINAL OPERATING INSTRUCTIONS

AG 125-A22 angle grinder

It is essential that the operating instructions are read before the power tool is operated for the first time.

Always keep these operating instructions together with the power tool.

Ensure that the operating instructions are with the power tool when it is given to other persons.

These numbers refer to the illustrations. You can find the illustrations at the beginning of the operating instructions.

In these operating instructions, the designation “power tool” always refers to the AG 125-A22 cordless angle grinder.

Operating controls and parts

1. Guard release button
2. Spindle lockbutton
3. Ventilation slots
4. Release buttons with additional function (charge status display activation)
5. Battery
6. Switch-on interlock
7. On / off switch
8. Vibration-absorbing side handle
9. Spindle
10. Guard
11. Clamping flange with O-ring
12. Abrasive cutting disc / abrasive grinding disc
13. Clamping nut
14. “Kwik lock” quick-release clamping nut (optional)
15. Wrench

1 General information

1.1 Safety notices and their meaning

DANGER
Draws attention to imminent danger that will lead to serious bodily injury or fatality.

WARNING
Draws attention to a potentially dangerous situation that could lead to serious personal injury or fatality.

CAUTION
Draws attention to a potentially dangerous situation that could lead to slight personal injury or damage to the equipment or other property.

NOTE
Draws attention to an instruction or other useful information.

1.2 Explanation of the pictograms and other information

Warning signs

| ![Warning sign] | General warning |

Obligation signs

| ![Obligation sign] | Wear eye protection Read the operating instructions before use. |
2 Safety instructions

NOTE
The safety rules in section 2.1 contain all general safety rules for power tools which, in accordance with the applicable standards, must be listed in the operating instructions. Accordingly, some of the rules listed may not be relevant to this power tool.

2.1 General power tool safety warnings

a) **WARNING**
Read all safety warnings and all instructions. Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury. Save all warnings and instructions for future reference. The term “power tool” in the warnings refers to your mains-operated (corded) power tool or battery-operated (cordless) power tool.

b) Keep work area clean and well lit. Cluttered or dark areas invite accidents.

c) Do not operate power tools in explosive atmospheres, such as in the presence of flammable liquids, gases or dust. Power tools create sparks which may ignite the dust or fumes.

d) Keep children and bystanders away while operating a power tool. Distractions can cause you to lose control.

e) Power tool plugs must match the outlet. Never use any adapter plugs with earthed (grounded) power tools. Unmodified plugs and matching outlets will reduce risk of electric shock.

f) Avoid body contact with earthed or grounded surfaces, such as pipes, radiators, ranges and refrigerators. There is an increased risk of electric shock if your body is earthed or grounded.

g) Do not expose power tools to rain or wet conditions. Water entering a power tool will increase the risk of electric shock.

2.1.2 Electrical safety

a) Do not abuse the cord. Never use the cord for carrying, pulling or unplugging the power tool. Keep cord away from heat, oil, sharp edges or moving parts. Damaged or entangled cords increase the risk of electric shock.

e) When operating a power tool outdoors, use an extension cord suitable for outdoor use. Use of a cord suitable for outdoor use reduces the risk of electric shock.

f) If operating a power tool in a damp location is unavoidable, use a residual current device (RCD) protected supply. Use of an RCD reduces the risk of electric shock.

2.1.3 Personal safety

a) Stay alert, watch what you are doing and use common sense when operating a power tool. Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication. A moment of inattention while operating power tools may result in serious personal injury.

b) Use personal protective equipment. Always wear eye protection. Protective equipment such as dust mask, non-skid safety shoes, hard hat, or hearing protection used for appropriate conditions will reduce personal injuries.

c) Prevent unintentional starting. Ensure the switch is in the off-position before connecting to power source and/or battery pack, picking up or carrying the tool. Carrying power tools with your finger on the switch or energising power tools that have the switch on invites accidents.

d) Remove any adjusting key or wrench before turning the power tool on. A wrench or a key left attached to a rotating part of the power tool may result in personal injury.

e) Do not overreach. Keep proper footing and balance at all times. This enables better control of the power tool in unexpected situations.

f) Dress properly. Do not wear loose clothing or jewellery. Keep your hair, clothing and gloves

<table>
<thead>
<tr>
<th>Symbols</th>
<th>Location of identification data on the power tool</th>
</tr>
</thead>
<tbody>
<tr>
<td>n /min RPM Ø</td>
<td>The type designation and serial number can be found on the type identification plate on the machine or tool. Make a note of this data in your operating instructions and always refer to it when making an enquiry to your Hilti representative or service department.</td>
</tr>
</tbody>
</table>

Type:

Generation: 01

Serial no.:
away from moving parts. Loose clothes, jewellery or long hair can be caught in moving parts.

g) If devices are provided for the connection of dust extraction and collection facilities, ensure these are connected and properly used. Use of dust collection can reduce dust-related hazards.

2.1.4 Power tool use and care

a) Do not force the power tool. Use the correct power tool for your application. The correct power tool will do the job better and safer at the rate for which it was designed.
b) Do not use the power tool if the switch does not turn it on and off. Any power tool that cannot be controlled with the switch is dangerous and must be repaired.
c) Disconnect the plug from the power source and/or the battery pack from the power tool before making any adjustments, changing accessories, or storing power tools. Such preventive safety measures reduce the risk of starting the power tool accidentally.
d) Store idle power tools out of the reach of children and do not allow persons unfamiliar with the power tool or these instructions to operate the power tool. Power tools are dangerous in the hands of untrained users.
e) Maintain power tools. Check for misalignment or binding of moving parts, breakage of parts and any other condition that may affect the power tool's operation. If damaged, have the power tool repaired before use. Many accidents are caused by poorly maintained power tools.
f) Keep cutting tools sharp and clean. Properly maintained cutting tools with sharp cutting edges are less likely to bind and are easier to control.
g) Use the power tool, accessories and tool bits etc. in accordance with these instructions, taking into account the working conditions and the work to be performed. Use of the power tool for operations different from those intended could result in a hazardous situation.

2.1.5 Battery tool use and care

a) Recharge only with the charger specified by the manufacturer. A charger that is suitable for one type of battery pack may create a risk of fire when used with another battery pack.
b) Use power tools only with specifically designated battery packs. Use of any other battery packs may create a risk of injury and fire.
c) When battery pack is not in use, keep it away from other metal objects, like paper clips, coins, keys, nails, screws or other small metal objects, that can make a connection from one terminal to another. Shorting the battery terminals together may cause burns or a fire.
d) Under abusive conditions, liquid may be ejected from the battery; avoid contact. If contact accidentally occurs, flush with water. If liquid contacts eyes, additionally seek medical help. Liquid ejected from the battery may cause irritation or burns.

2.1.6 Service

a) Have your power tool serviced by a qualified repair person using only identical replacement parts. This will ensure that the safety of the power tool is maintained.

2.2 Safety warnings common for grinding, sanding, wire brushing, polishing or abrasive cutting-off operations

a) This power tool is intended to function as a grinder or cut-off tool. Read all safety warnings, instructions, illustrations and specifications provided with this power tool. Failure to follow all instructions listed below may result in electric shock, fire and/or serious injury.
b) Operations such as sanding, wire brushing or polishing are not recommended to be performed with this power tool. Operations for which the power tool was not designed may create a hazard and cause personal injury.
c) Do not use accessories which are not specifically designed and recommended by the tool manufacturer. Just because the accessory can be attached to your power tool, it does not assure safe operation.
d) The rated speed of the accessory must be at least equal to the maximum speed marked on the power tool. Accessories running faster than their rated speed can break and fly apart.
e) The outside diameter and the thickness of your accessory must be within the capacity rating of your power tool. Incorrectly sized accessories cannot be adequately guarded or controlled.
f) Threaded mounting of accessories must match the grinder spindle thread. For accessories mounted by flanges, the arbor hole of the accessory must fit the locating diameter of the flange. Accessories that do not match the mounting hardware of the power tool will run out of balance, vibrate excessively and may cause loss of control.
g) Do not use a damaged accessory. Before each use inspect the accessory such as abrasive wheels for chips and cracks, backing pad for cracks, tear or excess wear, wire brush for loose or cracked wires. If power tool or accessory is dropped, inspect for damage or install an undamaged accessory. After inspecting and installing an accessory, position yourself and bystanders away from the plane of the rotating accessory and run the power tool at maximum no-load speed for one minute. Damaged accessories will normally break apart during this test time.
h) Wear personal protective equipment. Depending on application, use face shield, safety goggles or safety glasses. As appropriate, wear dust mask, hearing protectors, gloves and workshop apron capable of stopping small abrasive or workpiece fragments. The eye protection must be capable of stopping flying debris generated by various operations. The dust mask or respirator must be capable of filtering particles generated by your operation. Pro-
Do not operate the power tool near flammable materials.

Regularly clean the power tool’s air vents.

Do not run the power tool while carrying it at your side. Accidental contact with the spinning accessory could snag your clothing, pulling the accessory into your body.

Never lay the power tool down until the accessory has come to a complete stop. The spinning accessory may grab the surface and pull the power tool out of your control.

Do not run the power tool until the accessory has come to a complete stop. The spinning accessory may grab the surface and pull the power tool out of your control.

Do not run the power tool while carrying it at your side. Accidental contact with the spinning accessory could snag your clothing, pulling the accessory into your body.

Regularly clean the power tool’s air vents. The motor’s fan will draw the dust inside the housing and excessive accumulation of powdered metal may cause electrical hazards.

Do not operate the power tool near flammable materials. Sparks could ignite these materials.

Do not use accessories that require liquid coolants. Using water or other liquid coolants may result in electrocution or shock.

2.3 Kickback and related warnings

Kickback is a sudden reaction to a pinched or snagged rotating wheel, backing pad, brush or any other accessory. Pinching or snagging causes rapid stalling of the rotating accessory which in turn causes the uncontrolled power tool to be forced in the direction opposite of the accessory’s rotation at the point of the binding.

For example, if an abrasive wheel is snagged or pinched by the workpiece, the edge of the wheel that is entering into the pinch point can dig into the surface of the material causing the wheel to climb out or kick out. The wheel may either jump toward or away from the operator, depending on direction of the wheel’s movement at the point of pinching. Abrasive wheels may also break under these conditions.

Kickback is the result of power tool misuse and/or incorrect operating procedures or conditions and can be avoided by taking proper precautions as given below.

a) Maintain a firm grip on the power tool and position your body and arm to allow you to resist kickback forces. Always use auxiliary handle, if provided, for maximum control over kickback or torque reaction during start-up. The operator can control torque reactions or kickback forces, if proper precautions are taken.

b) Never place your hand near the rotating accessory. Accessory may kickback over your hand.

c) Do not position your body in the area where power tool may move if kickback occurs. Kickback will propel the tool in direction opposite to the wheel’s movement at the point of snagging.

d) Use special care when working corners, sharp edges etc. Avoid bouncing and snagging the accessory. Corners, sharp edges or bouncing have a tendency to snag the rotating accessory and cause loss of control or kickback.

e) Do not attach a saw chain woodcarving blade or toothed saw blade. Such blades create frequent kickback and loss of control.

2.4 Safety warnings specific for grinding and abrasive cutting-off operations

a) Use only wheel types that are recommended for your power tool and the specific guard designed for the selected wheel. Wheels for which the power tool was not designed cannot be adequately guarded and are unsafe.

b) The grinding surface of centre depressed wheels must be mounted below the plane of the guard lip. An improperly mounted wheel that projects through the plane of the guard lip cannot be adequately protected.

c) The guard must be securely attached to the power tool and positioned for maximum safety, so the least amount of wheel is exposed towards the operator. The guard helps to protect operator from broken wheel fragments, accidental contact with wheel and sparks that could ignite clothing.

d) Wheels must be used only for recommended applications. For example: do not grind with the side of cut-off wheel. Abrasive cut-off wheels are intended for peripheral grinding, side forces applied to these wheels may cause them to shatter.

e) Always use undamaged wheel flanges that are of correct size and shape for your selected wheel. Proper wheel flanges support the wheel thus reducing the possibility of wheel breakage. Flanges for cut-off wheels may be different from grinding wheel flanges.

f) Do not use worn down wheels from larger power tools. Wheel intended for larger power tool is not suitable for the higher speed of a smaller tool and may burst.

2.5 Additional safety warnings specific for abrasive cutting-off operations

a) Do not "jam" the cut-off wheel or apply excessive pressure. Do not attempt to make an excessive depth of cut. Overstressing the wheel increases the loading and susceptibility to twisting or binding of the wheel in the cut and the possibility of kickback or wheel breakage.

b) Do not position your body in line with and behind the rotating wheel. When the wheel, at the point of operation, is moving away from your body, the
possible kickback may propel the spinning wheel and the power tool directly at you.

c) When wheel is binding or when interrupting a cut for any reason, switch off the power tool and hold the power tool motionless until the wheel comes to a complete stop. Never attempt to remove the cut-off wheel from the cut while the wheel is in motion otherwise kickback may occur. Investigate and take corrective action to eliminate the cause of wheel binding.

d) Do not restart the cutting operation in the workpiece. Let the wheel reach full speed and carefully re-enter the cut. The wheel may bind, walk up or kickback if the power tool is restarted in the workpiece.

e) Support panels or any oversized workpiece to minimize the risk of wheel pinching and kickback. Large workpieces tend to sag under their own weight. Supports must be placed under the workpiece near the line of cut and near the edge of the workpiece on both sides of the wheel.

f) Use extra caution when making a "pocket cut" into existing walls or other blind areas. The protruding wheel may cut gas or water pipes, electrical wiring or objects that can cause kickback.

2.6 Additional safety instructions

2.6.1 Personal safety

a) Modification of the machine or tampering with its parts is not permissible.

b) Wear ear protectors. Exposure to noise can cause hearing loss.

c) Always hold the power tool securely with both hands on the grips provided. Keep the grips dry, clean and free from oil and grease.

d) Breathing protection must be worn if the power tool is used without a dust removal system for work that creates dust.

e) Improve the blood circulation in your fingers by relaxing your hands and exercising your fingers during breaks between working.

f) Avoid touching rotating parts. Switch the power tool on only after bringing it into position at the workpiece. Touching rotating parts, especially rotating insert tools, may lead to injury.

2.6.2 Power tool use and care

a) Grinding discs must be stored and handled carefully in accordance with the manufacturer's instructions.

b) Never use the power tool without the guard.

c) Secure the workpiece. Use clamps or a vice to secure the workpiece. The workpiece is thus held more securely than by hand and both hands remain free to operate the power tool.

d) Do not use cutting discs for grinding.

e) Tighten the disc and flange securely. If the nut securing the disc and flange is not tightened firmly, the disc may work loose from the spindle due to the braking effect of the power tool's motor after switching off.

2.6.3 Electrical safety

a) Before beginning work, check the working area (e.g. using a metal detector) to ensure that no concealed electric cables or gas and water pipes are present. External metal parts of the power tool may become live, for example, when an electric cable is damaged accidentally. This presents a serious risk of electric shock.

b) Dirty or dusty power tools that have been used frequently for work on conductive materials should be checked at regular intervals at a Hilti Service Center. Under unfavorable circumstances, dampness or dust adhering to the surface of the tool, especially dust from conductive materials, may lead to damage to the tool.

2.6.4 Careful handling and use of batteries

a) Observe the special guidelines applicable to the transport, storage and use of Li-ion batteries.

b) Do not expose batteries to high temperatures and keep them away from fire. This presents a risk of explosion.

c) Do not disassemble, squash or incinerate batteries and do not subject them to temperatures over 80°C. This presents a risk of fire, explosion or injury through contact with caustic substances.

d) Do not charge or continue to use damaged batteries (e.g. batteries with cracks, broken parts, bent or pushed-in and/or pulled-out contacts).

e) If the battery is too hot to touch it may be defective. Place the tool in a location where it can be kept
under observation, well away from flammable materials, and allow it to cool down. Contact Hilti Service after the battery has cooled down.

2.6.5 Work area safety

a) If the work involves breaking right through, take appropriate safety measures at the opposite side. Parts breaking away could fall out and/or fall down and injure other persons.

b) Slits cut in load-bearing walls of buildings or other structures may influence the statics of the structure, especially when steel reinforcing bars or load-bearing components are cut through. Consult the structural engineer, architect, or person in charge of the building project before beginning the work.

3 Description

3.1 Use of the product as directed

The power tool is designed for cutting and grinding metals and mineral materials. Do not use the battery as a power source for other unspecified appliances.

Working with metals: Only with synthetic resin-bonded, fiber-reinforced grinding or cutting discs.

Working with mineral materials: Cutting and slitting using the corresponding guard (DC-EX 125/5”-C), grinding using the corresponding guard (DG-EX 125/5”).

The power tool may be used only for dry cutting or grinding.

It is recommended that a dust removal system consisting of matched components, i.e. dust removal hood and a suitable Hilti vacuum cleaner, are used for working on mineral materials such as concrete or stone. These serve to protect the operator and increase the life of the power tool and disc used.

Working on materials hazardous to the health (e.g. asbestos) is not permissible.

Observe the national health and safety requirements.

To avoid the risk of injury, use only genuine Hilti accessories and insert tools.

The power tool is designed for professional use and may be operated, serviced and maintained only by trained, authorized personnel. This personnel must be informed of any special hazards that may be encountered. The power tool and its ancillary equipment may present hazards when used incorrectly by untrained personnel or when used not as directed.

3.2 Items supplied as standard include:

<table>
<thead>
<tr>
<th>Item</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Power tool</td>
</tr>
<tr>
<td>1 Side handle</td>
</tr>
<tr>
<td>1 Guard</td>
</tr>
<tr>
<td>1 Front cover</td>
</tr>
<tr>
<td>1 Clamping flange</td>
</tr>
<tr>
<td>1 Clamping nut</td>
</tr>
<tr>
<td>1 Wrench</td>
</tr>
<tr>
<td>1 Operating instructions</td>
</tr>
</tbody>
</table>

NOTE

Accessories can be found at your Hilti Center or online at www.hilti.com.

3.3 Additional items required for operating the power tool

A suitable battery of the specified type (see table in the Technical Data section) and a suitable battery charger from the C 4/36 series.

3.4 Temperature-dependent motor protection

The temperature-dependent motor protection system prevents the power tool overheating by monitoring current input and motor temperature.

In the event of motor overload due to application of excessive pressure to the disc, performance will drop noticeably or the power tool may stop running (avoid stalling the power tool in this way).

If the power tool has been overloaded, release the pressure applied and then allow it to run under no load for approx. 30 seconds.
3.5 DC-EX 125/5”-C compact dust removal hood for cutting

For cutting mineral materials.

**CAUTION**

Use of this guard for working on metal is not permissible.

3.6 Guard with front cover

**CAUTION**

When grinding with straight grinding discs and cutting with cutting discs in metalworking applications, use the guard with front cover.

3.7 DG-EX 125/5” dust removal hood for grinding

The power tool is suitable only for occasional use with diamond cup wheels for grinding mineral materials.

**CAUTION**

Use of this guard for working on metal is not permissible.

3.8 Lithium-ion battery charge status

When the lithium-ion battery is in use, the charge status can be indicated by gently pressing one of the battery release buttons (press until resistance is felt - do not release the battery). The display on the rear of the battery provides the following information:

<table>
<thead>
<tr>
<th>LEDs light constantly</th>
<th>LEDs blink</th>
<th>Charge status C</th>
</tr>
</thead>
<tbody>
<tr>
<td>LED 1, 2, 3, 4</td>
<td></td>
<td>C ≥ 75 %</td>
</tr>
<tr>
<td>LED 1, 2, 3</td>
<td></td>
<td>50 % ≤ C &lt; 75 %</td>
</tr>
<tr>
<td>LED 1, 2</td>
<td></td>
<td>25 % ≤ C &lt; 50 %</td>
</tr>
<tr>
<td>LED 1</td>
<td></td>
<td>10 % ≤ C &lt; 25 %</td>
</tr>
<tr>
<td>-</td>
<td>LED 1</td>
<td>C &lt; 10 %</td>
</tr>
</tbody>
</table>

**NOTE**

Indication of the charge status is not possible while the power tool is in operation or immediately after operation. If the battery charge status LEDs flash, please refer to the information given in the Troubleshooting section.

4 Consumables

Discs with a diameter of max. 125 mm, designed for a speed of 11000/min and a peripheral speed of 80 m/sec, and with a maximum thickness of 6.4 mm (abrasive grinding discs) or 2.5 mm (abrasive cutting discs).

Information about the power tool and applications

Drive spindle thread (arbor size) | M 14
Spindle length | 22 mm

NOTE

The vibration values given in these instructions have been measured in accordance with a standardized test and may be used to compare one electric tool with another. They may be used for a preliminary assessment of exposure. The data given represents the main applications of the electric tool. However, if the electric tool is used for different applications, with different accessories or is poorly maintained, the data may vary. This may significantly increase exposure over the total working period. An accurate estimation of exposure should also take into account the times when the tool is switched off, or when it is running but not actually being used for a job. This may significantly reduce exposure over the total working period. Identify additional safety measures to protect the operator from the effects of noise and/or vibration, for example: maintain the tool and the accessories, keep the hands warm, organization of work patterns.

Noise information (as perEN 60745-2-3):

Typical A-weighted sound power level, $L_{WA}$ | 94 dB (A)
Typical A-weighted emission sound pressure level, $L_{WA}$ | 83 dB (A)
Uncertainty for the given sound level, $K$ | 3 dB (A)

Vibration information in accordance with EN 60745

Triaxial vibration value (vibration vector sum) for the AG 125-A22 | Measured in accordance with EN 60745-2-3
Surface grinding using the vibration-absorbing side handle, $a_{h,AG}$ | 3.8 m/s²
Uncertainty (K) 1.5 m/s²
Additional information Other applications, such as cutting, may produce vibration values that deviate from the given values.

6 Before use

6.1 Inserting the battery
CAUTION Check that the power tool is switched off and the switch interlock activated before fitting the battery.
CAUTION Before inserting the battery in the power tool, check to ensure that the battery terminals and the contacts in the power tool are free from foreign objects.

1. CAUTION If the battery is not fitted correctly it may drop out and fall while the work is in progress. CAUTION A falling battery may present a risk of injury to yourself and others. Before beginning the work, check that the battery is securely seated in the tool.

6.2 Removing the battery from the power tool

6.3 Transport and storage of batteries
CAUTION Fire hazard. Never transport batteries in loose, bulk form. There is a risk of short circuiting.
Pull the battery out of the locked position (working position) and move it into the first latching position (transport position).
Observe national and international transport regulations when shipping batteries (transportation by road, rail, sea or air).

6.4 Fitting the side handle
Screw the side handle into one of the threaded bushings provided.

6.5 Guards
CAUTION Wear gloves when fitting or removing parts, when making adjustments or when remedying malfunctions.
Read the instructions for fitting the corresponding guard.

6.5.1 Fitting the guard
NOTE The guard is equipped with locating lugs that ensure only guards of a type suitable for use with the power tool can be fitted. The locating lugs of the guard fit into the guard mount on the power tool.

1. Fit the guard onto the drive spindle collar so that the two triangular marks on the guard and on the power tool are in alignment.
2. Push the guard onto the drive spindle collar; press the guard release button.
3. Rotate the guard until it engages and the guard release button jumps back into its original position.

6.5.1.1 Adjusting the guard
Press the guard release button and then rotate the guard until it engages in the desired position.

6.5.2 Removing the guard (hood)
Press the guard release button and remove the guard.

6.5.3 Fitting and removing the front cover
NOTE If you use the front cover, fit it by pushing it onto the guard.

1. Press the front cover onto the standard guard, with the closed side positioned as shown in the illustration, until it engages.
2. To remove the front cover, release the catch and then pull the front cover away from the standard guard.

6.5.4 Positioning the DC-EX 125° cutting guard
NOTE Take care to ensure that the on / off switch is freely accessible and operable at all times.

6.6 Fitting and removing discs
NOTE Diamond discs must be replaced when the cutting or grinding performance drops significantly. This generally is the case when the segments reach a height of less than 2 mm. Other discs must be replaced when the cutting performance drops significantly or other parts of the angle grinder (not the disc) come into contact with the material you are working on. Abrasive discs generally have to be replaced when the durability date has been reached.

6.6.1 Fitting discs
WARNING Tighten the disc and flange securely. If the nut securing the disc and flange is not tightened firmly, the disc may work loose from the spindle due to the braking effect of the power tool’s motor after switching off.
1. Remove the battery from the power tool.

2. **CAUTION** The clamping flange is equipped with an O-ring. **If this O-ring is missing, the clamping flange must be replaced.**
   - Fit the clamping flange onto the drive spindle (keyed fit to prevent slipping/rotation).

3. Fit the disc.
4. Screw on the clamping nut corresponding to the type of disc fitted.

5. **CAUTION** The spindle lockbutton may be pressed only when the drive spindle is motionless. There is otherwise a risk of causing irreparable damage to the gearing or that the disc works loose.
   - Press the spindle lockbutton and hold it in this position.

6. Use the wrench to tighten the clamping nut securely, then release the spindle lockbutton and remove the wrench.

### 6.6.2 Removing discs

1. Remove the battery from the power tool.
2. Press the drive spindle lockbutton and hold it in this position.
3. Release the clamping nut by gripping it with the wrench and turning the nut counterclockwise.
4. Release the drive spindle lockbutton and remove the disc.

### 6.7 Fitting and removing discs using Kwik lock

**NOTE**
The Kwik lock nut may be used instead of the standard clamping nut. No tools are then required for changing discs.

**CAUTION**
When operating the power tool, take care to ensure that the Kwik lock nut does not come into contact with the working surface. Do not use a damaged Kwik lock nut.

#### 6.7.1 Fitting discs using the Kwik lock clamping nut

1. Remove the battery from the power tool.
2. Clean the clamping flange and the quick-release clamping nut.

3. **CAUTION** The clamping flange is equipped with an O-ring. **If this O-ring is missing, the clamping flange must be replaced.**
   - Fit the clamping flange onto the drive spindle.

4. Fit the disc.
5. Screw the Kwik lock clamping nut onto the spindle until it contacts the disc (the side with the lettering should be visible after the nut is screwed on).

6. **CAUTION** The spindle lockbutton may be pressed only when the drive spindle is motionless. There is otherwise a risk of causing irreparable damage to the gearing or that the disc works loose.
   - Press the spindle lockbutton and hold it in this position.

7. Use the wrench to tighten the clamping nut or, respectively, rotate the disc firmly by hand in a clockwise direction until the Kwik lock nut is tight, then release the spindle lockbutton and remove the wrench (where applicable).

#### 6.7.2 Removing discs secured with Kwik lock

1. Remove the battery from the power tool.
2. Release the Kwik lock nut by turning the knurled ring counterclockwise. (Use the pin wrench to release the Kwik lock nut if very tight. Do not use a pipe wrench.)

### 7 Operation

**WARNING**
Always use the side handle with the power tool (use the hoop handle as an option).

**CAUTION**
The insert tool may get hot during use. Wear protective gloves when changing insert tools.

#### 7.1 Rough grinding

**CAUTION**
Never use abrasive cutting discs for grinding.

Best results are obtained when the disc maintains an angle of 5° to 30° with the working surface when grinding. Move the power tool to and fro while applying moderate pressure. This will avoid overheating and discoloration of the workpiece and ensure an even surface finish.

#### 7.2 Cutting

When cutting, apply moderate feed pressure and do not tilt the power tool or, respectively, the cutting disc (hold at approx. 90° to the surface being cut). For best results, start cutting at the smallest cross section when cutting profiles and square tube.

#### 7.3 On / off switch with switch-on interlock

The on / off switch with safety lock (switch-on interlock) gives you full control of the switch function and avoids unintentional restarting.
1. Push the safety lock (switch-on interlock) forward to unlock the on / off switch and then press the switch fully.

2. The safety lock (switch-on interlock) returns automatically to the locked position when the on / off switch is released.

## 8 Care and maintenance

**WARNING**
Reparists to the electrical section of the power tool may be carried out only by trained electrical specialists.

**CAUTION**
Before beginning cleaning, remove the battery in order to prevent the electric tool starting unintentionally.

### 8.1 Care of the power tool

**DANGER**
Under extreme conditions, when used for working on metal, conductive dust may accumulate inside the tool. This may have an adverse effect on the tool’s protective insulation. In this case, use of a stationary dust extraction system and frequent cleaning of the ventilation slots are recommended.

Never operate the power tool when the air vents are blocked. Regularly clean the power tool’s air vents carefully with a dry brush. Do not permit foreign objects to enter the interior of the tool. The motor’s fan will draw dust into the casing and an excessive accumulation of conductive dust (e.g. metal, carbon fiber) may cause electrical hazards. Clean the outside of the power tool at regular intervals with a slightly damp cloth. Do not use a spray, steam pressure cleaning equipment or running water for cleaning. This may negatively affect the electrical safety of the tool. Always keep the grip surfaces of the tool free from oil and grease. Do not use cleaning agents which contain silicone.

**NOTE**
Frequent work on conductive materials (e.g. metal, carbon fiber) may make shorter maintenance intervals necessary. Take your individual workplace risk assessment into account.

### 8.2 Care of the Li-ion battery

**NOTE**
Battery performance drops at low temperatures.

**NOTE**
Store the battery in a cool and dry place.

In order to achieve maximum battery life, stop using the battery as soon as a significant drop in battery performance is noticed.

**NOTE**
- If use continues, further battery discharge will be stopped automatically before the battery cells suffer damage.
- Charge the batteries using the specified and approved Hilti battery chargers for Li-ion batteries.

### 8.3 Checking the power tool after care and maintenance

After carrying out care and maintenance work on the power tool, check that all protective and safety devices are fitted and that they function faultlessly.

## 9 Troubleshooting

<table>
<thead>
<tr>
<th>Fault</th>
<th>Possible cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The battery runs down more quickly than usual.</td>
<td>Very low ambient temperature.</td>
<td>Allow the battery to warm up slowly to room temperature.</td>
</tr>
<tr>
<td>The battery doesn’t engage with an audible click.</td>
<td>The retaining lugs on the battery are dirty.</td>
<td>Clean the retaining lugs and push the battery in until it engages. Contact Hilti Service if the problem persists.</td>
</tr>
<tr>
<td>LED 1 blinks.</td>
<td>The battery is discharged.</td>
<td>Charge the battery.</td>
</tr>
<tr>
<td>The tool is overloaded (application limits exceeded).</td>
<td>Use the right power tool for the job (don’t use a low-powered tool for heavy work).</td>
<td></td>
</tr>
<tr>
<td>The power tool doesn’t run and 1 LED blinks.</td>
<td>The battery is discharged.</td>
<td>Change the battery and charge the empty battery.</td>
</tr>
<tr>
<td>The tool doesn’t work and all 4 LEDs blink.</td>
<td>The battery is too hot or too cold.</td>
<td>Bring the battery to the recommended working temperature.</td>
</tr>
<tr>
<td>The power tool has been overloaded briefly.</td>
<td>Release the switch and press it again.</td>
<td></td>
</tr>
</tbody>

### 10 Disposal

**CAUTION**
Improper disposal of the equipment may have serious consequences: the burning of plastic components generates toxic fumes which may present a health hazard. Batteries may explode if damaged or exposed to very high temperatures, causing poisoning, burns, acid burns or environmental pollution. Careless disposal may permit unauthorized and improper use of the equipment. This may result in serious personal injury, injury to third parties and pollution of the environment.

**CAUTION**
Dispose of defective batteries right away. Keep them out of reach of children. Do not disassemble or incinerate the batteries.

**CAUTION**
Batteries that have reached the end of their life must be disposed of in accordance with national regulations or returned to Hilti.

![Recycling Symbol]

Most of the materials from which Hilti power tools or appliances are manufactured can be recycled. The materials must be correctly separated before they can be recycled. In many countries, Hilti has already made arrangements for taking back your old power tools or appliances for recycling. Please ask your Hilti customer service department or Hilti representative for further information.

For EC countries only

Disposal of electric tools together with household waste is not permissible. In observance of the European Directive on waste electrical and electronic equipment and its implementation in accordance with national law, electrical appliances that have reached the end of their life must be collected separately and returned to an environmentally compatible recycling facility.
11 Manufacturer’s warranty - tools

Please contact your local Hilti representative if you have questions about the warranty conditions.

12 EC declaration of conformity (original)

Designation: Angle grinder
Type: AG 125-A22
Generation: 01
Year of design: 2011

We declare, on our sole responsibility, that this product complies with the following directives and standards: 2006/42/EC, 2004/108/EC, 2006/66/EC, 2011/65/EU, EN 60745-1, EN 60745-2-3, EN ISO 12100.
