It is essential that the operating instructions are read before the machine is operated for the first time.

Always keep these operating instructions together with the machine.

Ensure that the operating instructions are with the machine when it is given to other persons.

1. General information

1.1 Safety notices and their meaning
-DANGER-
Draws attention to imminent danger that will lead to serious bodily injury or fatality.

-WARNING-
Draws attention to a potentially dangerous situation that could lead to serious personal injury or fatality.

-CAUTION-
Draws attention to a potentially dangerous situation that could lead to slight personal injury or damage to the equipment or other property.

-NOTE-
Draws attention to an instruction or other useful information.

1.2 Pictograms

Prohibition signs

Transport by crane is not permissible.

On the vacuum baseplate

An additional means of securing the drill stand must be employed when used for horizontal drilling with vacuum attachment.

Below:
Use of only the vacuum baseplate to secure the drill stand for overhead drilling is not permissible.

On the tool

Use of the water collector system in conjunction with a wet-type vacuum cleaner is mandatory when working overhead on ceilings.

1 These numbers refer to the corresponding illustrations. The illustrations can be found on the fold-out cover pages. Keep these pages open while studying the operating instructions.

In these operating instructions, the designation "the machine" refers to the DD 200 core drilling machine.

Location of identification data on the machine
The type designation and serial number can be found on the rating plate on the machine. Make a note of this data in your operating instructions and always refer to it when making an enquiry to your Hilti representative or service department.

Type: DD 200

Serial no.: 

Type: DD-HD 30

Serial no.:

General warning
Warning: electricity
Warning: hot surface

Obligation signs

Wear eye protection
Wear a safety helmet
Wear ear protection
Wear safety gloves
Wear safety boots

Read the operating instructions before use.

Recycle waste material

Use of a correctly functioning GFCI (ground fault circuit interrupter) is mandatory.
2. General safety rules

1. WARNING!
Read and understand all instructions.
Failure to follow all instructions listed below may result in electric shock, fire and/or serious personal injury.
SAVE THESE INSTRUCTIONS

2. Work Area
Keep your work area clean and well lit. Cluttered benches and dark areas invite accidents.
Do not operate power tools in explosive atmospheres, such as in the presence of flammable liquids, gases, or dust. Power tools create sparks which may ignite the dust or fumes.
Keep bystanders, children and visitors away while operating a power tool. Distractions can cause you to lose control.

3. Electrical Safety
Grounded tools must be plugged into an outlet properly installed and grounded in accordance with all codes and ordinances. Never remove the grounding prong or modify the plug in any way. Do not use any adaptor plugs. Check with a qualified electrician if you are in doubt as to whether the outlet is properly grounded. If the tools should electrically malfunction or break down, grounding provides a low resistance path to carry electricity away from the user.
Avoid body contact with grounded surfaces such as pipes, radiators, ranges and refrigerators. There is an increased risk of electric shock if your body is grounded.
Don’t expose power tools to rain or wet conditions. Water entering a power tool will increase the risk of electric shock.
Do not abuse the cord. Never use the cord to carry the tools or pull the plug from an outlet. Keep cord away from heat, oil, sharp edges or moving parts.
Replace damaged cords immediately. Damaged cords increase the risk of electric shock.
When operating a power tool outside, use an outdoor extension cord marked «W-A» or «W». These cords are rated for outdoor use and reduce the risk of electric shock.

4. Personal Safety
Stay alert, watch what you are doing and use common sense when operating a power tool. Do not use a tool while tired or under the influence of drugs, alcohol, or medication. A moment of inattention while operating power tools may result in serious personal injury.
Dress properly. Do not wear loose clothing or jewelry. Contain long hair. Keep your hair, clothing, and gloves away from moving parts. Loose clothes, jewelry, or long hair can be caught in moving parts.
Avoid accidental starting. Be sure switch is off before plugging in. Carrying tools with your finger on the switch or plugging in tools that have the switch on invites accidents.
Remove adjusting keys or wrenches before turning the tool on. A wrench or a key that is left attached to a rotating part of the tool may result in personal injury.
Do not overreach. Keep proper footing and balance at all times. Proper footing and balance enables better control of the tool in unexpected situations.

Use safety equipment. Always wear eye protection. Dust mask, non-skid safety shoes, hard hat, or hearing protection must be used for appropriate conditions.

5. Tool Use and Care
Use clamps or other practical way to secure and support the workpiece to a stable platform. Holding the work by hand or against your body is unstable and may lead to loss of control.
Do not force tool. Use the correct tool for your application. The correct tool will do the job better and safer at the rate for which it is designed.
Do not use tool if the switch does not turn it on or off. Any tool that cannot be controlled with the switch is dangerous and must be repaired.
Disconnect the plug from the power source before making any adjustments, changing accessories, or storing the tool. Such preventive safety measures reduce the risk of starting the tool accidentally.
Store idle tools out of reach of children and other untrained persons. Tools are dangerous in the hands of untrained users.
Maintain tools with care. Keep cutting tools sharp and clean. Properly maintained tools with sharp cutting edges are less likely to bind and are easier to control.
Check for misalignment or binding of moving parts, breakage of parts and any other condition that may affect the tools operation. If damaged, have the tool serviced before using. Many accidents are caused by poorly maintained tools.
Use only accessories that are recommended by the manufacturer for your model. Accessories that may be suitable for one tool may become hazardous when used on another tool.

6. Service
Tool service must be performed only by qualified repair personnel. Service or maintenance performed by unqualified personnel could result in a risk of injury.
When servicing a tool, use only identical replacement parts. Follow instructions in the Maintenance section of this manual. Use of unauthorized parts or failure to follow Maintenance Instructions may create a risk of electric shock or injury.

3. Specific safety rules and symbols

**Note:** Approval must be obtained from the site engineer or architect prior to beginning drilling work. Drilling work on buildings and other structures may influence the statics of the structure, especially when steel reinforcing bars or load-bearing components are cut through.

- It is recommended that rubber gloves and non-slip shoes are worn when working outdoors.
- Check that all core bits are in good condition before use. Do not use deformed or damaged core bits.
- Ensure that the workplace is well ventilated.
- When drilling through-holes, the area below the ceiling, floor or behind the wall where the drilling is taking place must be secured as the drilled-out core may fall out.
- To avoid tripping and falling when working, always lead the supply cord, extension cord and water hose away from the rear.
- Keep the supply cord, extension cord, water hose and vacuum hose away form rotating parts of the machine.

**WARNING:** Before beginning drilling, check that there are no live electric cables located in the area where the hole is to be made.

- Concealed electric cables or gas and water pipes present a serious hazard if damaged while you are working. Accordingly, check the area in which you are working beforehand (e.g. using a metal detector). External metal parts of the machine may become live, for example, when an electric cable is drilled into inadvertently.
- Do not work from a ladder.

- Keep the grips dry, clean and free from oil and grease.
- Never leave the machine unattended.
- When not in use, the machine must be stored in a dry place.
- If a GFCI is supplied with the power tool, never operate the power tool without the GFCI.
- Check the GFCI each time before use.
- Avoid skin contact with drilling slurry.
- Wear respiratory protection when the work creates dust, e.g. during dry drilling. Connect a vacuum cleaner to the drilling system. Drilling into materials that present a health hazard (e.g. asbestos) is not permissible.
- Do not touch rotating parts.
- Make sure that all clamping screws are tightened correctly.
- After detaching the column extension, the end cap (with built-in, safety-relevant end stop function) must be refitted to the drill stand.

**Note:** The tool is not intended for use by children, by debilitated persons or those who have received no instruction or training.

- Make sure that the machine is correctly and securely attached to the drill stand.
- Do not touch rotating parts.
- Make sure that all clamping screws are tightened correctly.
- After detaching the column extension, the end cap (with built-in, safety-relevant end stop function) must be refitted to the drill stand.

**Note:** Check the condition of the extension cord and replace it if damage is found.

- Check the condition of the machine and its accessories. Do not operate the machine or its accessories if damage is found, if the machine is incomplete or if its controls cannot be operated faultlessly.
- Do not touch the supply cord in the event of it suffering damage while working. Disconnect the supply cord plug from the socket.

- In the event of a power failure, switch the machine off and unplug the supply cord.
- Avoid using extension cords with multiple sockets and the simultaneous use of several machines connected to one extension cord.
- Never operate the machine when it is dirty or wet. Dust (especially dust from conductive materials) or dampness adhering to the surface of the machine may, under unfavorable conditions, cause an electric shock to be received. Dirty or dusty machines should thus be checked at a Hilti service center at regular intervals, especially used frequently for working on conductive materials.

- The tool is not intended for use by children, by debilitated persons or those who have received no instruction or training.
- Children must be instructed not to play with the tool.

**WARNING:** Some dust created by grinding, sanding, cutting and drilling contains chemicals known to cause cancer, birth defects, infertility or other reproductive harm; or serious and permanent respiratory or other injury. Some examples of these chemicals are: lead from lead-based paints, crystalline silica from bricks, concrete and other masonry products and natural stone, arsenic and chromium from chemicallytreated lumber. Your risk from these exposure varies, depending on how often you do this type of work. To reduce exposure to these chemicals, the operator and bystanders should work in a well-ventilated area, work with approved safety equipment, such as respiratory protection appropriate for the type of dust generated, and designed to filter out microscopic particles and direct dust away from the face and body. Avoid prolonged contact with dust. Wear protective clothing...
and wash exposed areas with soap and water. Allowing dust to get into your mouth, nose, eyes, or to remain on your skin may promote absorption of harmful chemicals.

- The core bit may become hot during use. Wear protective gloves when changing core bits.
- The machine is intended for professional use.
- The machine may be operated, serviced and repaired only by authorized, trained personnel. This personnel must be informed of any special hazards that may be encountered.
- Exercise your fingers during pauses between work to improve blood circulation in your fingers.
- The user and any other persons in the vicinity must wear suitable eye protection, a hard hat, ear protection, protective gloves and safety footwear while the machine is in use.

4. Functional description

4.1 Use of the equipment as intended
The DD 200 and DD HD-30 form a drilling rig designed for wet core drilling in mineral materials using diamond core bits (hand-held use is not permissible).
The drive unit must always be mounted on the drill stand when in use and the drill stand secured adequately by means of an anchor or vacuum base plate.
Manipulation or modification of the drive unit, drill stand or accessories is not permissible. To avoid the risk of injury, use only original Hilti accessories and insert tools.
Observe the information printed in the operating instructions concerning operation, care and maintenance.
Observe the safety rules and operating instructions for the accessories used.
Do not use a hammer or other heavy object when making adjustments to the baseplate.
The drive unit, drill stand, accessories and insert tools may present hazards when used incorrectly by untrained personnel or not as directed.
The machine may be operated only when connected to an adequately rated electric supply equipped with an earth / ground conductor.

</tr>
</tbody>
</table>

Use of the water collector system in conjunction with a wet-type vacuum cleaner is mandatory when working overhead on ceilings.
Horizontal drilling in conjunction with the vacuum base plate (accessory) is permissible only when an additional means of securing the drill stand is employed.
Drilling into materials hazardous to the health (e.g. asbestos) is not permissible.

See figure 1 and the explanations of operating controls and the tool components on page 1.

</tbody>
</table>

Do not use extension cords with 1.25 mm² or 16 AWG conductor cross sections.

6.2 Use of a generator or transformer

This machine may be powered by a generator or transformer which fulfills the following conditions:
- AC voltage, output power at least 4000 VA
- The operating voltage must be within +5% and −15% of the rated voltage at all times.
- Frequency range 50 – 60 Hz, never above 65 Hz
- Automatic voltage regulation with starting boost
- Never operate other machines or appliances from the generator or transformer at the same time. Switching other machines or appliances on and off may cause undervoltage and / or overvoltage peaks, resulting in damage to the machine.

6.3 Preparations

-CAUTION-

- The machine, the diamond core bit and the drill stand are heavy.
- There is a risk of pinching parts of the body.
- Wear a hard hat, protective gloves and safety boots.

6.3.1 Setting up the drill stand

-NOTE-
If the drill stand has been folded up to facilitate transport, proceed as follows:
1. Release the screws at the top end of the strut and at the column pivot.
2. Pivot the column into the vertical position (as far as it will go).
3. Tighten the screw at the top end of the strut and at the column pivot securely.

-NOTE-
The end cap must be fitted on the end of the column. It serves as a protector and as the end stop.

6.3.2 Fitting the hand wheel

-NOTE-
The hand wheel can be fitted on the left or right side of the carriage, on either of the two axles. The upper axle drives the carriage directly while the lower axle drives the carriage by way of reduction gearing.
1. Fit the hand wheel to one of the two axles on either the left or right side of the carriage.
2. Secure the hand wheel with the screw provided.

6.3.3 Fastening the drill stand with an anchor

-WARNING-
Use an anchor suitable for the material on which you are working and observe the anchor manufacturer’s instructions.

-NOTE-
Hilti M16 metal expansion anchors are usually suitable for fastening diamond core drilling equipment to uncracked concrete. Under certain conditions it may be necessary to use an alternative fastening method. Please contact Hilti Technical Service if you have any questions about secure fastening.
1. Set the anchor, of a type suitable for the material on which you are working, ideally at a distance of 330 mm (13") from the center of the point where the hole is to be drilled.
2. Screw the clamping spindle (accessory) into the anchor.
3. Position the drill stand over the spindle and bring it into alignment with the aid of the hole center indicator. When the spacer is used (accessory), the hole center indicator cannot be used to align the drill stand.
4. Screw the clamping nut onto the spindle but do not tighten it.
5. Level the base plate by way of the three leveling screws. The two level indicators on the carriage serve as a leveling aid.
6. Use a 27 mm AF open-end wrench to tighten the clamping nut on the spindle. Alternatively, the rear leveling screws can be tightened. The strut can be pivoted out of the way to facilitate access.
7. Check that the drill stand is fastened securely.
6.3.4 Fastening the drill stand with the vacuum base plate (accessory)

-CAUTION-
Check the surface on which the vacuum base plate is to be mounted. An uneven, rough surface can significantly reduce the effectiveness of the vacuum fastening system. Coatings or laminated surfaces may be pulled away while working with the vacuum base plate.

-NOTE-
Suitable for use only with core bits of up to 300 mm diameter and without use of a spacer.

-NOTE-
The hand grip on the vacuum base plate is equipped with a vacuum valve which can be used to release the vacuum.

1. Turn the four leveling screws back until they project approx. 5 mm beneath the vacuum base plate.
2. Connect the hose between the vacuum base plate and the vacuum pump.
3. Position the drill stand on the vacuum base plate.
4. Fit the screw and washer provided.
5. Mark the center point of the hole to be drilled.
6. Draw a line approximately 800 mm in length from the center mark toward the approx. position at which the drill stand is to be secured.
7. Make a mark on the 800 mm line at a distance of 165 mm (6 1/2") from the hole center mark.
8. Bring the marks on the vacuum base plate into alignment with the 800 mm line.
9. Position the center of the front edge of the vacuum base plate on the line at the 165 mm (6 1/2") mark.

-NOTE- Before using the vacuum pump, make yourself familiar with the information contained in its operating instructions and observe these instructions.

10. Switch on the vacuum pump and press the vacuum release valve.
11. Once the drill stand has been positioned correctly, remove your finger from the vacuum release valve and press the base plate against the work surface.

-CAUTION- Ensure that the pressure gauge pointer remains within the green area before beginning drilling and during the drilling operation.

12. Use the four leveling screws to level the vacuum base plate. The 2 built-in level indicators on the carriage serve as leveling aids. Note: Do not attempt to level the anchor base plate on the vacuum base plate. This is not permissible.
13. An additional means of securing the drill stand must be employed when drilling horizontally (e.g. a chain attached to an anchor, ...)
14. Check that the drill stand is fastened securely.

6.3.5 Adjusting the angle of the drill stand (adjustable to max. 45°)

-CAUTION-
Take care to avoid pinching your fingers at the pivot. Wear protective gloves.
1. Release the screw at the pivot at the lower end of the column and at the strut at the top end.
2. Bring the column into the desired position. The angle scale on the rear serves as an adjustment aid.
3. Retighten the two screws securely.

6.3.6 Using the column extension (accessory)

1. Remove the end cap (with built-in end stop) from the top end of the column and refit it to the end of the column extension.
2. Fit the cylindrical section of the column extension into the end of the column on the drill stand.
3. Secure the column extension by tightening the eccentric locking bolt.
4. A depth gauge (accessory) may be fitted on the column as an additional end stop.
5. The end cap (with built-in end stop) must be refitted to the column on the drill stand when the column extension is subsequently removed. The end stop is a safety-relevant part and must always be used.

6.3.7 Fitting the spacer (accessory)

-NOTE-
The distance between the drilling axis and the drill stand must be increased by fitting the spacer when diamond core bits with a diameter greater than 12 in (300 mm) are to be used. The hole center indicator cannot be used in conjunction with the spacer. These instructions presume that the drive unit is not already fitted.
1. Lock the carriage in position on the column (activate the carriage locking mechanism).
2. Release the drive unit locking bolt.
3. Pull out the locking bolt.
4. Fit the spacer onto the carriage.
5. Push the locking bolt into the carriage as far as it will go.
6. Tighten the locking bolt securely.

6.3.8 Mounting the drive unit on the drill stand

-NOTE-
Ensure that the drive unit is disconnected from the electric supply.
1. Lock the carriage in position on the column (activate the carriage locking mechanism).
2. Pull out the drive unit locking bolt.
3. Fit the drive unit onto the carriage or spacer.
4. Push the locking bolt into the carriage or spacer as far as it will go.
5. Tighten the locking bolt securely.
6. Clip the supply cord into the supply cord guide on the carriage cover.
7. Check that the drive unit is mounted securely.
6.3.9 Connecting the water supply
1. Close the water flow regulator on the drive unit.
2. Connect the water supply hose to the hose connector.

-NOTE-
A water flow indicator (accessory) can be connected between the water supply hose and the hose connector on the drive unit.

-CAUTION-
Check the hoses for damage at regular intervals and ensure that the maximum permissible water supply pressure of 6 bar is not exceeded.

6.3.10 Fitting the water collector system (accessory)

-NOTE-
Use of the water collection system permits water to be drained away from the core bit thus avoiding soiling the surrounding area. We recommend use of the water collector system with core bits of up to 10 in (250 mm) diameter. Best results are achieved in conjunction with a wet-type vacuum cleaner.

Use of the water collection system in conjunction with a wet-type vacuum cleaner is mandatory for overhead drilling. The drill stand must be set up at 90° to the ceiling. The water collector seal must be of a size suitable for the core bit diameter used.
1. Release the screw on the drill stand (at the front lower end of the column).
2. Slide the water collector holder into place behind the screw from below.
3. Tighten the screw securely.
4. Fit the water collector between the two moveable arms of the water collector holder.
5. Secure the water collector by way of the two screws on the water collector holder.
6. Connect the water collector to a wet-type vacuum cleaner. Alternatively, the water can be allowed to flow away through a length of hose attached to the connector.

6.3.11 Adjusting the depth gauge (accessory)
1. Turn the hand wheel until the core bit contacts the material in which the hole is to be drilled.
2. Set the desired drilling depth by adjusting the distance between the carriage and the depth gauge.
3. Secure the depth gauge by tightening the clamping screw.

6.3.12 Fitting a diamond core bit (drive unit with Hilti BL chuck)

-CAUTION-
Do not use damaged core bits. Check the core bits for chipping, cracks, or heavy wear each time before use.
Do not use damaged tools. Fragments of the workpiece or a broken core bit may be ejected and cause injury beyond the immediate area of operation.

-NOTE-
Diamond core bits must be replaced when the cutting performance and/or rate of drilling progress drops significantly. This generally is the case when the segments reach a height of less than 2 mm.

-CAUTION-
Fitting and positioning the core bit incorrectly can lead to hazardous situations as parts can break and fly off.
Check that the core bit is seated correctly.
1. Lock the carriage in position on the column (activate the carriage locking mechanism) and check that the drill stand is fastened securely.
2. Open the chuck by turning it in the direction of the "open" symbol (open brackets).
3. Push the connection end of the diamond core bit into the chuck on the drive unit from below until it engages with the gear teeth.
4. Close the chuck by turning it in the direction of the "closed" symbol (closed brackets).
5. Check that the diamond core bit it is held securely (check by hand for play and try to pull it away from the chuck).

6.3.13 Selecting drilling speed

-CAUTION-
Do not change gear while the motor is running. Wait until rotation has stopped.
1. Select the gear according to the core bit diameter to be used.
2. Move the gear selector switch to the desired setting while rotating the core bit by hand.
7. Operation

7.1 Switching on and checking the GFCI ground fault interrupter

1. Plug the drive unit supply cord into an electric socket with earth connection.
2. Press the "ON" button on the GFCI ground fault interrupter (the indicator must light).
3. Press the "TEST" button on the GFCI ground fault interrupter (the indicator must go out).

-DANGER-
If the indicator continues to light, further operation of the machine is not permissible. Have the machine repaired by a qualified specialist using genuine Hilti spare parts.
4. Press the "ON" button on the GFCI ground fault interrupter (the indicator must light).

7.2 Core bit diameters and corresponding gears

<table>
<thead>
<tr>
<th>Gear</th>
<th>Core bit diameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>152–400 mm (6” – 16&quot;)</td>
</tr>
<tr>
<td>2</td>
<td>82–162 mm (3\4/&quot; – 6\4/&quot; )</td>
</tr>
<tr>
<td>3</td>
<td>25–82 mm (1” – 3\4/”)</td>
</tr>
</tbody>
</table>

When coring heavily reinforced or very hard concrete (e.g. flint or high-performance concrete), particularly with diameters 82 mm (3\4/”) and 152–162 mm (6”–6\4/”), it is recommended to use the lower gear.

7.3 Operating the drilling machine without the water collector system and wet vacuum cleaner

-NOTE-
The water flows away in uncontrolled fashion. Overhead drilling is not permissible!

7.3.1 Switching on

1. Open the water flow regulator slowly until the desired volume of water is flowing.
2. Press the on / off switch on the drive unit (switch position " I ").
3. Release the carriage lock.
4. Turn the hand wheel until the core bit comes into contact with the material in which the hole is being drilled.
5. Apply only light pressure until the core bit has become centered and then gradually increase the pressure.
6. Regulate the pressure applied to the core bit by observing the drilling performance indicator (optimum drilling performance is achieved when the green lamps in the display light).

7.4 Operating the drilling machine with the water collector system (accessory)

-NOTE-
The water is allowed to flow away through a length of hose. Overhead drilling is not permissible!

-Caution-
Do not allow water to come into contact with the drive unit.

7.4.1 Switching on

1. Open the water flow regulator slowly until the desired volume of water is flowing.
2. Press the on / off switch on the drive unit (switch position " I ").
3. Release the carriage lock.
4. Turn the hand wheel until the core bit comes into contact with the material in which the hole is being drilled.
5. Apply only light pressure until the core bit has become centered and then gradually increase the pressure.
6. Regulate the pressure applied to the core bit by observing the drilling performance indicator (optimum drilling performance is achieved when the green lamps in the display light).

7.5 Operating the drilling machine with the water collector system and wet-type vacuum cleaner (accessories)

-NOTE-
Drilling at an angle in an upwards direction is not permissible (the water collector is not functional). The core bit fills with water during overhead drilling.

-Caution-
Water must not be allowed to run over the drive unit.

-NOTE-
The wet-type vacuum cleaner must be switched on man-
ually before beginning drilling and switched off manually at the end of the drilling operation.

### 7.5.1 Switching on

1. Switch on the wet-type vacuum cleaner. Do not use automatic mode.
2. Ensure that the water supply is connected and ready for use.
3. Open the water flow regulator.
4. Press the on/off switch on the drive unit (switch position “I”).
5. Release the carriage lock.
6. Turn the hand wheel until the core bit comes into contact with the material in which the hole is being drilled.
7. Apply only light pressure until the core bit has become centered and then gradually increase the pressure.
8. Regulate the pressure applied to the core bit by observing the drilling performance indicator (optimum drilling performance is achieved when the green lamps in the display light).

### 7.6 Switching off

1. Close the water flow regulator.
2. Withdraw the diamond core bit from the hole.

Caution: The core bit fills with water during overhead drilling. After overhead drilling, the water must first be allowed to drain from the core bit. This is done by disconnecting the water supply hose from the connector on the drive unit and then opening the water flow regulator valve (do not allow the water to flow back through the water flow indicator). The water must not be allowed to run over the drive unit.
3. Engage the carriage lock.
4. Switch off the drive unit.
5. Switch off the vacuum cleaner, if used.
6. To ensure that the drill stand remains in balance, lower the core bit until in contact with the working surface or fold out the hole center indicator (this is not effective if using the vacuum baseplate).
7. If necessary, remove the core from the core bit.

### 7.7 Removing the drive unit from the drill stand

- **NOTE-**
  - Transport the drive unit, drill stand and diamond core bit as separate units.
  - Use the wheel assembly (accessory) to facilitate transport.
  - Open the water flow regulator before storing the power tool. Especially at temperatures below freezing, take care to ensure that no water remains in the power tool.

1. Secure the carriage on the column by engaging the carriage lock.
2. Hold the drive unit securely with one hand on the carrying grip. **CAUTION-** The drive unit may otherwise fall from the drill stand!
3. Release the drive unit eccentric locking bolt with the other hand.
4. Pull out the eccentric locking bolt.
5. Remove the drive unit from the carriage.
6. Push the eccentric locking bolt back into the carriage as far as it will go.

### 7.8 Disposing of drilling slurry

see Section 11 “Disposal”.

### 7.9 Procedure in the event of the core bit sticking

The slip clutch will be activated if the core bit sticks. The power tool must then be switched off by the operator. To release the core bit, proceed as follows:

**Using an open-end wrench to release the core bit**

1. Disconnect the supply cord plug from the power outlet.
2. Grip the core bit close to the connection end with a suitable open-end wrench and rotate the core bit to release it.
3. Plug the supply cord back into the power outlet.

**Using the spider wheel to release the core bit**

1. Disconnect the supply cord plug from the power outlet.
2. Release the core bit by rotating it with the spider wheel.
3. Plug the supply cord back into the power outlet.
4. Continue the drilling operation.

### 7.10 Transport and storage

- **NOTE-**
  - Transport the drive unit, drill stand and diamond core bit as separate units.
  - Use the wheel assembly (accessory) to facilitate transport.
  - Open the water flow regulator before storing the power tool. Especially at temperatures below freezing, take care to ensure that no water remains in the power tool.
8. Care and maintenance

Disconnect the supply cord plug from the socket.

**Care of insert tools and metal parts**
Remove any dirt adhering to the core bits and protect their surfaces from corrosion by rubbing them with an oily cloth from time to time.

### 8.1 Care of the machine

**-CAUTION-**
Keep the power tool, especially its grip surfaces, clean and free from oil and grease. Do not use cleaning agents which contain silicone.
The outer casing of the tool is made from impactresistant plastic. Sections of the grip are made from a synthetic rubber material.
Never operate the tool when the ventilation slots are blocked. Clean the ventilation slots carefully using a dry brush. Do not permit foreign objects to enter the interior of the tool.
Clean the outside of the tool at regular intervals with a slightly damp cloth. Do not use a spray, steam pressure cleaning equipment or running water for cleaning. This may negatively affect the electrical safety of the tool.

### 8.2 Maintenance

Check all external parts of the machine for damage at regular intervals and check that all controls operate faultlessly. Do not operate the machine if parts are damaged or when the controls do not function faultlessly.
If necessary, the machine should be repaired at a Hilti repair center.
Repairs to the electrical section of the machine may be carried out only by trained electrical specialists.

### 8.3 Replacing the carbon brushes

The indicator lamp with the wrench symbol lights when the carbon brushes require to be replaced.

Failure to observe the following instructions may present a possibility of coming into contact with a dangerous high voltage. The machine may be operated, serviced and repaired only by authorized, trained personnel. This personnel must be informed of any special hazards that may be encountered.
1. Disconnect the drive unit from the electric supply.
2. Remove the covers from the right and left sides of the drive unit.
3. Remove the used carbon brushes from the drive unit. Note how the brushes are fitted.
4. Fit the new carbon brushes exactly as the old carbon brushes (Spare part no.: 279526).
5. Screw the covers back on to the right and left sides of the machine.

### 8.4 Adjusting play between the column and the carriage

The play between the column and the carriage can be adjusted by way of 4 eccentrically-mounted rollers. The 4 rollers shown in the illustration can be adjusted.
First remove the drive unit from the drill stand and run the carriage up to the top of the column by turning the hand wheel. The 4 rollers can then be adjusted as follows:
1. Use a 5 mm AF hex. socket wrench to unscrew the locking screw slightly (do not remove the screw).
2. Use a 19 mm AF open-end wrench to turn the eccentric axle, thus pushing the roller slightly toward the column.
3. Tighten the locking screw.

### 8.5 Checking the equipment after care and maintenance

All functions must be checked after care and maintenance.
9. Tools and accessories

11. Disposal

Most of the materials from which Hilti tools or machines are manufactured can be recycled. The materials must be correctly separated before they can be recycled. In many countries, Hilti has already made arrangements for taking back your old machines or tools for recycling. Please ask your Hilti customer service department or Hilti sales representative for further information.

Should you wish to return the machine or tool yourself to a disposal facility for recycling, proceed as follows:

Dismantle the machine or tool as far as possible without the need for special tools. Use absorbent paper to wipe oily parts clean and collect any oil or grease that runs out. This paper should also be disposed of correctly. On no account should oil or grease be allowed to enter the waste water system or find its way into the ground.

Separate the individual parts as follows:

</tr>
</tbody>
</table>

* Plastic parts carry a mark indicating the material from which they are made.

** With regard to environmental aspects, allowing drilling slurry to flow directly into rivers, lakes or the sewerage system without suitable pre-treatment is problematical. Ask the local authorities for information about applicable regulations.

We recommend the following pre-treatment:

Collect the drilling slurry (e.g. use a wet-type industrial vacuum cleaner).

Allow the slurry to settle and dispose of the solid material at a construction waste disposal site (the addition of a flocculent may accelerate the settling process).

Water from the drilling slurry (alkaline, pH value > 7) should be neutralized by adding an acidic neutralizing agent or large quantity of water before it is allowed to flow into the sewerage system.

12. Manufacturer's warranty – tools

Hilti warrants that the tool supplied is free of defects in material and workmanship. This warranty is valid so long as the tool is operated and handled correctly, cleaned and serviced properly and in accordance with the Hilti Operating Instructions, and the technical system is maintained. This means that only original Hilti consumables, components and spare parts may be used in the tool.

This warranty provides the free-of-charge repair or replacement of defective parts only over the entire lifespan of the tool. Parts requiring repair or replacement as a result of normal wear and tear are not covered by this warranty.

Additional claims are excluded, unless stringent national rules prohibit such exclusion. In particular, Hilti is not obligated for direct, indirect, incidental or consequential damages, losses or expenses in connection with, or by reason of, the use of, or inability to use the tool for any purpose. Implied warranties of merchantability or fitness for a particular purpose are specifically excluded.

For repair or replacement, send tool or related parts immediately upon discovery of the defect to the address of the local Hilti marketing organization provided.

This constitutes Hilti’s entire obligation with regard to warranty and supersedes all prior or contemporaneous comments and oral or written agreements concerning warranties.
