Original operating instructions
1 Information about the documentation

1.1 About this documentation
• Read this documentation before initial operation or use. This is a prerequisite for safe, trouble-free handling and use of the product.
• Observe the safety instructions and warnings in this documentation and on the product.
• Always keep the operating instructions with the product and make sure that the operating instructions are with the product when it is given to other persons.

1.2 Explanation of symbols used

1.2.1 Warnings
Warnings alert persons to hazards that occur when handling or using the product. The following signal words are used:

⚠️ DANGER
DANGER !
▷ Draws attention to imminent danger that will lead to serious personal injury or fatality.

⚠️ WARNING
WARNING !
▷ Draws attention to a potential threat of danger that can lead to serious injury or fatality.

⚠️ CAUTION
CAUTION !
▷ Draws attention to a potentially dangerous situation that could lead to slight personal injury or damage to the equipment or other property.

1.2.2 Symbols in the documentation
The following symbols are used in this document:

🔍 Read the operating instructions before use.
💡 Instructions for use and other useful information
♻️ Dealing with recyclable materials
🚫 Do not dispose of electric equipment and batteries as household waste

1.2.3 Symbols in the illustrations
The following symbols are used in illustrations:

2 These numbers refer to the corresponding illustrations found at the beginning of these operating instructions
3 The numbering reflects the sequence of operations shown in the illustrations and may deviate from the steps described in the text
11 Item reference numbers are used in the overview illustrations and refer to the numbers used in the product overview section
👀 This symbol is intended to draw special attention to certain points when handling the product.

1.3 Product information
.products are designed for professional users and only trained, authorized personnel are permitted to operate, service and maintain the products. This personnel must be specifically informed about
the possible hazards. The product and its ancillary equipment can present hazards if used incorrectly by untrained personnel or if used not in accordance with the intended use.

The type designation and serial number are printed on the rating plate.

- Write down the serial number in the table below. You will be required to state the product details when contacting Hilti Service or your local Hilti organization to inquire about the product.

# Safety

## 2.1 General power tool safety warnings

### WARNING

**Read all safety warnings and all instructions.** Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury.

**Save all warnings and instructions for future reference.**

The term “power tool” in the warnings refers to your mains-operated (corded) power tool or battery-operated (cordless) power tool.

### Work area safety

- **Keep work area clean and well lit.** Cluttered or dark areas invite accidents.
- **Do not operate power tools in explosive atmospheres, such as in the presence of flammable liquids, gases or dust.** Power tools create sparks which may ignite the dust or fumes.
- **Keep children and bystanders away while operating a power tool.** Distractions can cause you to lose control.

### Electrical safety

- **Power tool plugs must match the outlet. Never modify the plug in any way. Do not use any adapter plugs with earthed (grounded) power tools.** Unmodified plugs and matching outlets will reduce risk of electric shock.
- **Avoid body contact with earthed or grounded surfaces, such as pipes, radiators, ranges and refrigerators.** There is an increased risk of electric shock if your body is earthed or grounded.
- **Do not expose power tools to rain or wet conditions.** Water entering a power tool will increase the risk of electric shock.
- **Do not abuse the cord. Never use the cord for carrying, pulling or unplugging the power tool. Keep cord away from heat, oil, sharp edges or moving parts.** Damaged or entangled cords increase the risk of electric shock.
- **When operating a power tool outdoors, use an extension cord suitable for outdoor use.** Use of a cord suitable for outdoor use reduces the risk of electric shock.
- **If operating a power tool in a damp location is unavoidable, use a residual current device (RCD) protected supply.** Use of an RCD reduces the risk of electric shock.

### Personal safety

- **Stay alert, watch what you are doing and use common sense when operating a power tool. Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication.** A moment of inattention while operating power tools may result in serious personal injury.
- **Use personal protective equipment. Always wear eye protection.** Protective equipment such as dust mask, non-skid safety shoes, hard hat, or hearing protection used for appropriate conditions will reduce personal injuries.
- **Prevent unintentional starting. Ensure the switch is in the off-position before connecting to power source and/or battery pack, picking up or carrying the tool.** Carrying power tools with your finger on the switch or energising power tools that have the switch on invites accidents.
Remove any adjusting key or wrench before turning the power tool on. A wrench or a key left attached to a rotating part of the power tool may result in personal injury.

Do not overreach. Keep proper footing and balance at all times. This enables better control of the power tool in unexpected situations.

Dress properly. Do not wear loose clothing or jewellery. Keep your hair, clothing and gloves away from moving parts. Loose clothes, jewellery or long hair can be caught in moving parts.

If devices are provided for the connection of dust extraction and collection facilities, ensure these are connected and properly used. Use of dust collection can reduce dust-related hazards.

Power tool use and care

Do not force the power tool. Use the correct power tool for your application. The correct power tool will do the job better and safer at the rate for which it was designed.

Do not use the power tool if the switch does not turn it on and off. Any power tool that cannot be controlled with the switch is dangerous and must be repaired.

Disconnect the plug from the power source and/or the battery pack from the power tool before making any adjustments, changing accessories, or storing power tools. Such preventive safety measures reduce the risk of starting the power tool accidentally.

Store idle power tools out of the reach of children and do not allow persons unfamiliar with the power tool or these instructions to operate the power tool. Power tools are dangerous in the hands of untrained users.

Maintain power tools. Check for misalignment or binding of moving parts, breakage of parts and any other condition that may affect the power tool's operation. If damaged, have the power tool repaired before use. Many accidents are caused by poorly maintained power tools.

Keep cutting tools sharp and clean. Properly maintained cutting tools with sharp cutting edges are less likely to bind and are easier to control.

Use the power tool, accessories and tool bits etc. in accordance with these instructions, taking into account the working conditions and the work to be performed. Use of the power tool for operations different from those intended could result in a hazardous situation.

Service

Have your power tool serviced by a qualified repair person using only identical replacement parts. This will ensure that the safety of the power tool is maintained.

2.2 Additional safety instructions for breakers

Personal safety

Use the product only when it is in technically faultless condition.

Never tamper with or modify the tool in any way.

When chiseling into ceilings, walls and floors, always make sure that you have a safe and firm stance. A sudden break-through can affect your balance!

Apply appropriate safety measures at the opposite side of the workpiece in work that involves breaking through. Parts breaking away could fall out and/or fall down causing injury to other persons.

You and any other persons in the vicinity must wear suitable eye protection, a hard hat, ear protection, protective gloves and respiratory protection while the tool is in use.

Wear protective gloves also when changing the accessory tool. Touching the accessory tool can result in cuts and burns.

Wear eye protection. Flying fragments can injure the body and eyes.

Before starting work, check the hazard class of the dust that will be produced when working. Use an industrial vacuum cleaner with an officially approved protection class in compliance with the locally applicable dust protection regulations. Dust from materials such as lead-based paint, certain types of wood and concrete/masonry/stone containing quartz, minerals or metal can be harmful to health.

Make sure that the workplace is well ventilated and, where necessary, wear a respirator appropriate for the type of dust generated. Contact with or inhalation of the dust may cause allergic reactions and/or respiratory or other diseases among operators or bystanders. Certain kinds of dust are classified as carcinogenic such as oak and beech dust, especially in conjunction with additives for wood conditioning (chromate, wood preservative). Material containing asbestos may be handled only by specialists.

Take breaks and do physical exercises to improve the blood circulation in your fingers. Exposure to vibration during long periods of work can lead to disorders of the blood vessels and nervous system in the fingers, hands and wrists.
Electrical safety

- Before beginning work, check the working area for concealed electric cables or gas and water pipes. External metal parts of the power tool can become live, presenting a risk of electric shock, if you accidentally damage an electric cable.

Careful handling and use of electric tools

- Wait until the power tool stops completely before you lay it down.
3 Description

3.1 Product overview
3.2 Intended use

The product described is an electrically powered breaker. It is designed for medium-duty chiseling work on masonry and concrete.

- Operation is permissible only when connected to a power source providing a voltage and frequency in compliance with the information given on the type identification plate.

3.3 Items supplied

Breaker, operating instructions, cleaning cloth, grease.

Other system products approved for use with this product can be found at your local Hilti Store or at: www.hilti.group.

4 Technical data

4.1 Breaker

For rated voltage, rated current, frequency and/or input power, refer to the country-specific type identification plate.

If the device is powered by a generator or transformer, the generator or transformer’s power output must be at least twice the rated input power shown on the rating plate of the device. The operating voltage of the transformer or generator must always be within +5 % and -15 % of the rated voltage of the device.

This device complies with the applicable standard provided that the maximum permissible supply impedance (Z_{max}) at the point where the user’s installation is connected to the public supply network is less than or equal to 0.401 \ \Omega. It is the responsibility of the installer or user of the device to ensure, if necessary by consultation with the supply network operator, that the device is connected only at a point where supply impedance is less than or equal to Z_{max}.

4.2 Noise information and vibration values in accordance with EN 62841

The sound pressure and vibration values given in these instructions were measured in accordance with a standardized test and can be used to compare one power tool with another. They can also be used for a preliminary assessment of exposure.

The data given represent the main applications of the power tool. However, if the power tool is used for different applications, with different accessory tools, or is poorly maintained, the data can vary. This can significantly increase exposure over the total working period.

An accurate estimation of exposure should also take into account the times when the tool is switched off, or when it is running but not actually being used for a job. This can significantly reduce exposure over the total working period.

Identify additional safety measures to protect the operator from the effects of noise and/or vibration, for example: maintaining the power tool and accessory tools, keeping the hands warm, organization of work patterns.

5 Operation

5.1 Preparations at the workplace

⚠️ CAUTION
Risk of injury! Inadvertent starting of the product.
▶ Unplug the supply cord before making adjustments to the power tool or before changing accessories.

Observe the safety instructions and warnings in this documentation and on the product.

5.2 Fitting the accessory tool

1. Apply a little grease to the connection end of the accessory tool.
   ➥ Use only genuine Hilti grease. Use of the wrong grease can result in damage to the tool.
2. Pull the accessory tool release ring back and hold it securely.
3. Push the accessory tool into the chuck as far as it will go and then release the ring.
4. After fitting the accessory tool, grip it and pull it firmly in order to check that it is securely engaged.
   ➥ The product is ready for use.

5.3 Removing the accessory tool

▶ Pull the accessory tool locking ring back as far as it will go and remove the accessory tool.
5.4 Fitting the side handle (optional)

1. Release the side handle clamping band by turning the handle grip.
2. Slide the side handle clamping band over the chuck from the front and into the recess provided.
3. Adjust the side handle to the desired position.
4. Tighten the side handle clamping band by turning the handle grip.

5.5 Types of work

**WARNING**

*A damaged supply cord presents a hazard!* Do not touch the supply cord or extension cord if damaged while working. Disconnect the supply cord plug from the power outlet.

- Check the appliance’s supply cord at regular intervals and have it replaced by a qualified specialist if found to be damaged.

Check extension cords at regular intervals and replace them if found to be damaged.

5.5.1 Chiseling

1. Slowly press the control switch.

   * Running speed can be controlled smoothly up to maximum by varying how far the control switch is pressed.

2. To switch the power tool off, release the control switch.

5.5.2 Switching on and off in sustained operating mode

*When chiseling, the control switch can be locked in the “on” position.*
1. Press the control switch and then press the lockbutton.
2. Release the control switch and then the lockbutton.
   ➤ The power tool then runs in sustained operating mode.
3. To switch off when in sustained operating mode, press the control switch again and then release it.
   ➤ The power tool switches off.

6 Care and maintenance

⚠️ WARNING
Risk of injury with battery inserted!
➤ Always remove the battery before carrying out care and maintenance tasks!

Care and maintenance of the tool
• Carefully remove stubborn dirt.
• Clean the air vents carefully with a dry brush.
• Use only a slightly damp cloth to clean the casing. Do not use cleaning agents containing silicone as
   these can attack the plastic parts.

Care of the Li-ion batteries
• Keep the battery free from oil and grease.
• Use only a slightly damp cloth to clean the casing. Do not use cleaning agents containing silicone as
   these may attack the plastic parts.
• Avoid ingress of moisture.

Maintenance
• Check all visible parts and controls for signs of damage at regular intervals and make sure that they all
   function correctly.
• Do not operate the product if signs of damage are found or if parts malfunction. Have it repaired
   immediately by Hilti Service.
• After cleaning and maintenance, fit all guards or protective devices and check that they function correctly.

To help ensure safe and reliable operation, use only genuine Hilti spare parts and consumables. Spare
parts, consumables and accessories approved by Hilti for use with the product can be found at your
local Hilti Store or online at: www.hilti.group.

7 Transport and storage
• Do not transport electric tools with accessory tools fitted.
• Always unplug the supply cord before storing an electric tool or appliance.
• Store tools and appliances in a dry place where they cannot be accessed by children or unauthorized
  persons.
• Check electric tools or appliances for damage after long periods of transport or storage.
